Alberta Wheat Pool

The string of 165 Alberta Wheat Pool elevators established something of a record when they reported handlings of 670,000 bushels in one day.

The annual meeting of the Alberta Wheat Pool will be held on Wednesday, November 23, in Calgary. The reports for the year will be presented to the pool delegates.

H. W. Wood, chairman of the board of directors of the Alberta Wheat Pool, told the Calgary Kiwanis Club in the course of an address, that if the farmers cannot sell their own wheat scientifically there is little hope for agriculture in Canada.

Many contracts covering large acreages are being received by the Alberta Wheat Pool. J. J. Bowles of Calgary, who owns 24 sections of farm land in Southern Alberta, has signed a contract; also Nat Bryant of Hussar, has placed his six sections under a pool contract.

The Alberta Wheat Pool terminal at Prince Rupert loaded the first cargo of wheat from the 1926 crop for Europe this week.

Construction has started on the foundation of the new 2,400,000 pool terminal at Vancouver. It will be ready for the 1928 crop, and will cost $2,000,000.

Delia Board of Trade

Mr. Davidson, who is the chief construction engineer of the Highway Board of Commissioners, accompanied by Mr. Chappell, engineer on construction at Munson, visited Delia on Thursday, the 3rd inst., for the purpose of looking into the matter of the new Calgary-Saskatoon highway, and its present location in the vicinity of Delia. Messrs. Davidson and Chappell were taken over the proposed road by some members of the Board of Trade, and seemed to be favorably impressed with the request of the Board to have the main highway come to Delia. After inspection had been made of the road a shooting party was arranged in honor of Messrs. Davidson and Chappell, and they reported having at least seen lots of game.

At the banquet held complimentary to their visit in the Queen's Hotel about thirty-five people were present, and the duck dinner supplied by the members of the Board of Trade was very much appreciated by those in attendance. Owing to the time being so short, the members of the executive were unable to get around and see many who no doubt would have been present.

During the course of the evening Mr. Newcombe favored the guests with two solos, very appropriately chosen for the occasion, and accompanied on the piano by Miss Walker who also rendered a piano solo.

After a few able remarks by the president, Mr. R. A. Stewart, manager of the local Bank of Commerce he called on Mr. Davidson to address the meeting, who gave a very interesting talk on the programme of the Highway Board of Commissioners at the present time, and emphasized the necessity of permanency in our main roads.

G. H. Webster, M.L.A. for Calgary, joined the guests after supper, and when called upon by the president gave a very interesting talk on the necessity of good roads, and the formation and maintenance of a Board of Trade in the community.

The supper was terminated with the singing of "God Save the King," and Messrs. Davidson and Chappell left immediately thereafter by motor for Drumheller.

Edmonton Again To Have Normal School

A new normal school, the third provincial teacher-training institution in the province, is to be established in Edmonton in time for the opening of the 1928-29 term, announces Hon. Perren Baker, Minister of Education. Vacant rooms in some of the city schools will be utilized for the first year, pending the erection of a permanent building for this purpose.

The freedom men really desire is freedom from the needlessly that keeps them from getting a million.

H. A. BROWN,

whose appointment as Vice-President and General Manager of General Motors of Canada, at the age of 37, marks him as one of the youngest higher executives in the automotive industry. Mr. Brown has been connected with the General Motors organization for a number of years, having held the position of comptroller at Oshawa since September, 1924. He succeeds Gordon Lefebvre, who has assumed an important post with the Oakland Motor Car Company at Pontiac, Michigan.

Alberta Grain Again To Seek International Honors

Alberta entries will again be heavy at the Chicago International Hay and Grain Show, according to Provincial Field Crops Commissioner W. J. Stephen, and some splendid samples from this province will compete with the best from all parts of the continent. Herman Trelle, of Wembley, winner of the world's championships in both wheat and oats at the 1926 show, will again be among the exhibitors this year. In addition to a number of prize-winners in previous years, the names of several new growers appear in the following list of entries received by Mr. Stephen:

Arthur Morris, Imy; Roland S. Young, Wembley; C. Edwards, Donalda; C. Mercer, Mercer; J. C. Boehler, M.L.A., Gleichen; J. H. Cortes, Duffield; R. H. MacDonald, Trochu; Thos. Knowles, Irma; W. A. Day, Macleod; H. G. Dunfield, Delia; Douglas Ward, Okotoks; W. G. Gair, Killam; H. Schellenberger, Spruce Grove; D. M. Moir, Sedgewick; John McRae, Erskine; B. Harvie, Edgerton; R. A. Meeks, Manyville; Andrew McSporran, Chauvin; Nels Linden, Wetaskiwin; R. H. Hancox, Rochfort Bridge; Hans Mayer, Vegreville; Richard Harrison, Ohaton; Albert Strong, Calgary; A. R. Leslie, Sedgewick; S. L. Philpott, Strathcona; and J. H. Smith, Wolf Creek. A number of entries not included in the above list are expected from the Brooks district.

Carhartt Cotton Mills Seek Factory Site In West

Edmonton, along with other cities in the west, is being investigated by the Hamilton Carhartt Mills Ltd., the largest manufacturers of overalls in the world, as a possible site for the establishment of a western factory and distributing centre. The Carhartt factory, it is stated, would employ some 50 persons, and have an annual payroll of around $50,000.

Card of Thanks

Mr and Mrs. W. Morrison wish to thank the Sentinel Hill Women's Institute for the lovely flowers; also the Majestic and Farrel Lake Women's Institute for the lovely plant sent Mrs. W. Morrison during her recent illness.

A. JOHNSTON, Deputy Minister of Marine and Fisheries

Hand Hills Constituency W.I.

The postponed Hand Hills constituency conference of Women's Institutes will be held in Munson in the United Church on Monday, November 28th, 1927, morning session beginning at 9:30, afternoon session at 2:00, evening at 7:30—Mrs. G. M. Gibson, convenor, presiding. The program proposed for the October date will be followed, and it is hoped at this later date Hon. Mrs. Parlby and Miss Jenie MacMillan will be present.

Reports of convenors of standing committees, and of delegates from institutes and girls' clubs will be given at morning and afternoon sessions.

Mrs. Wilson, pres of Press Club, Calgary, will report on the essay competition, and read the prize essay, "The Romance of the Hudson's Bay Company."

Dr. Thomson, child welfare specialist, will speak on "After Care of Infantile Paralysis," and in the evening on "The Objects and Methods of Social Hygiene." Addresses will also be given by Rev. Mr. Howey, Rev. Father McGillivrary, of Munson; Mrs. Montgomery, Director District No. 3 A.W.I.; Miss Page, Drumheller, Past President of A.W.I. Girls' Clubs.

Along with this splendid program the Munson W. I. will entertain the conference at Luncheon.

The ladies of St. Patrick's Church, Munson, hope to put on a tea at 6 o'clock for those attending the conference, charging 40 cents.

These sessions are all in the interests of public welfare, to which everyone is invited, the afternoon and evening sessions, perhaps being of more general interest to those who are not institute members.

CRAIGMYLE NEWS.

Miss Joyce Farrow, accompanied by her father, Alfred Farrow; also Miss M. Bogart, motored to Calgary on Saturday afternoon. Mr. Farrow went to his home in Vancouver on Sunday, while Miss Farrow and Miss Bogart returned here on Monday evening's train.

Thos. McKimmie, night clerk at the station, is suffering from a slight attack of pneumonia, and we wish him a speedy recovery.

Mrs. D. L. Sloan returned home from Calgary on Saturday night's train, having spent the previous week there visiting Mr. Sloan's mother.

Sunday morning last ushered in winter for the season, and several who had been planning trips by motor for Thanksgiving week-end, found their plans considerably interfered with.

On Saturday evening last Lane C. Eggs, who operates a justly famous threshing outfit in this district, gave a dance to his friends in the Farmers' Hall, at which there was a large attendance, and a most enjoyable evening was spent.

Mr. and Mrs. J. R. Chabot left on Friday morning last for Calgary, en route to the coast to spend the winter.

Judging from the reports of the number of residents who plan to spend the winter in other parts, there will be very few left to look after things.

A Good Deed

It was our pleasure, says a writer in a New York paper, to meet with the Boy Scout spirit, fully matured, aboard a Long Island train recently. At one of the stations the gentleman seated in front of us accidentally dropped a glove out the window just as the train started to move out. Without a moment's hesitation he tossed the other one after it. Moved by curiosity, we dropped all reserve to ask him why he had done so. He courteously explained that the one glove that remained would have done him no good, nor would the lost glove have done the finder any good. This being the case, he had tossed out the other, so that the finder might have a complete set.

The viewpoint and line of conduct of this man might well serve as an object lesson to those who are constantly looking for some one thing that benefits no others. The average person, it is to be feared, would have grumbled and bemoaned his loss,—small though it be,—and generally made himself and possibly others miserable for a time, and all to no end. But the hero of this little incident, which might have passed unobserved, enjoyed a brighter outlook on life and a finer conception of things generally. He had sustained a loss which, under the circumstances existing, could not be restored. He realized on the instant that he must accept that loss. His immediate thought was as to how his loss could be turned to somebody's gain.

If in family and community life and activities the spirit displayed by this unknown man became the inspiration of our thought and the guiding motive of our actions, how much happier this old world would become. What contentment of spirit and real joy in living would be experienced by those who adopted and followed such a policy of unselfishness, resulting in an inner gain of satisfaction far outweighing the outward and material loss sustained.

Such a spirit and code of conduct costs nothing, and how much more satisfactory it would be to that unknown finder of the glove if he could have determined that if he must lose, or has lost, he will at least have the satisfaction,—poor though it be,—that nobody shall be the gainer thereby.

There are people no doubt who are inclined to belittle and scoff at the insistence on the whole-souled manner of the Boy Scout organization as an unhealthy watchful for opportunities for helping others in order that they may do at least one good turn a day. But if such people would strive for just one week to emulate the Scout code to good time they would very quickly discover a new richness and joy in their own lives while at the same time happiness and gain would be conferred on others.

The people of Canada are observing the day of National Thanksgiving, and in a few weeks all Christendom will be joyously celebrating the happiest day in all the year, Christmas. Many may have sustained losses and suffered defeats in the months that are passed without making the slightest effort to extract such profit as they could from their losses and transmute their defeats into ultimate victory. Possibly they are still bemoaning the sad fate which overtook them, feeling sorry for themselves, and declaring that luck is against them. Such an attitude will avail nothing; it merely makes for further discontent, discouragement, and additional failure and loss. Such an attitude is taking the joy out of their own future lives and making for unhappiness and misery for others.

Let the dead past bury its dead. Forget your losses and disappointments except as they can be capitalized to realize future gains, if not for yourself, then for somebody else. In the long run this will mean gain for you.

Canada Will Redeem Loans

Thirty-Seven Millions Will Soon Be Taken Off Market

Thirty-seven millions in Dominion loans will be taken off the market and redeemed from revenue on December 1. Of this, twenty-nine millions consist of 5½ per cent. five year Victory renewal loan. The remaining eight is in treasury notes.

Sixty-three millions 5½ per cent. Victory loans also fall due on December 1. The present plan is to meet as much of this as possible from revenues and to issue a refunding loan for the balance. Actual steps to be taken will depend, however, on incoming revenues during the next month. In any event, it is expected that the refunding will result in a saving in interest charges of at least one per cent. per annum.

An Entirely New Product

Krupp Firm Are Now Turning Out False Teeth Made Of Steel

False teeth of steel are among the peace products which the Krupp firm of Essen now are turning out. Various grades of non-rusting steel have been found to be most suitable for the purpose, but the now so-called V.A. steel is acid proof as well. It is the invention of Prof. Strauss of the Krupp Works, who gained the gold Bunsen medal recently for his process. Steel teeth are claimed to be even superior to gold in durability and at the same time are much cheaper.

On Ladies' Toes Are Sore Corns

Quick safe relief is almost instantaneous if you apply Putnam's Corn Extractor. Shoes won't pinch and any more. One single drop of Putnam's stops the pain. A few applications takes the corn up and dries off. Putnam's Corn Extractor gives permanent satisfaction. Use it every day. Get a bottle from your druggist. Refuse a substitute for Putnam's.

Clever Deaf Children

Band Of Twelve In Wisconsin School Give Concert

A band of twelve small totally deaf children, directing their entire energy to producing a perfect rhythm and ignore the matter of melody, has been organized by the Wisconsin School for the Deaf and is the culmination of an interesting experiment in human psychology.

The children recently gave a concert in which they played a march, a dance, and a lullaby with three cymbals, one set of bells, one drum, two tambourines, two triangles, and three miniature xylophones.

11 OUT OF 83

cases ended in death! So a recent Canadian investigation showed. These were not cases of infectious diseases — of consumption — typhoid! These were cases where a person had sustained some slight injury—a cut, a burn, a wire-prick —and where the wound, being thought not serious enough for careful treatment, had been neglected. Blood-poisoning and death resulted. When you or your children! maintain any injury, ensure against infection by applying Zam-Buk. This balm soothes the pain, stops bleeding, and by destroying all germs prevents blood-poisoning. Hence no time need be lost from work or pleasure by those who use Zam-Buk. All dealers, 50c. box.

Zam-Buk

Has Suitable Airport

Edmonton All Ready For Moth Planes Promised By Government

Increasing interest is being manifest throughout the country in the project sponsored by the Department of National Defence regarding all-Canada plane clubs, and it was stated at Ottawa by departmental officers that two queries had been received formally requiring the government to fulfil its part of the scheme by shipping the two Moth planes promised under the provincial unit.

Edmonton, Alta., which has already a suitable airport, stood the department declaring that the city's application was the first to receive Government action. A number of prominent Albertans are behind the Edmonton club and it is expected will be fulfilled as soon as the planes are available.

The Edmonton clubmen declare that all the requirements of the Government in connection with the craft are maintained. "The presumption is," they declare, "that the Edmonton club will be the first to get going."

Flying men in Montreal have also approached the department with regard to the formation of a club, and other cities will shortly follow suit.

Worms cause frecklishness and rob the infant of sleep. For great nourisher, Mother Graves' Worm Exterminator will give the speediest relief. Best at all times and restores healthfulness.

Build Big Dirigibles

Two Being Built In England For Inter-Imperial Communication

"The first of the two five million cubic feet dirigibles now being built in England for use on the Atlantic inter-imperial commercial communication will be completed in about two years, and will be followed by the most sure to result, in nearly all respects," Lieut. Col. Leach, D.S.O., formerly described as general debility, is due to poor blood—blood that is thin and lacks vitality. When the blood is thin and weak your whole system suffers. You lose appetite, have no energy, your nerves trouble you and you are miserable.

What you need to help to build up your blood and you should begin at once is a tonic that will enrich and feed by taking Dr. Williams' Pink Pills. You will quickly see the difference in your health by a better appetite and increased vigor. There are lines of the new blood created by Dr. Williams' Pink Pills that revitalize all the organs of the body to healthy activity and so the system gains nourishment and strength. If you are weak or sick of sorts, begin gaining new strength and health to-day by taking Dr. Williams' Pink Pills. "I was in a badly run down condition," says Mrs. J. Poitte, of Winnifred, Alta., "when I began using Williams' Pink Pills and they quickly restored my health. I strongly recommend this medicine to all weak people."

Dr. Williams' Pink Pills are sold by all medicine dealers or by mail at 50 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Cushing Lady—Oh, Mr. Jones, we are collecting funds to help the starving heathen. May I put your name on the sugar list?

An Oil That Is Famous.—Though Canada was not the birthplace of Dr. Thomas' Eclectric Oil, it is the home of that famous compound. From here its world fame was spread to Central and South America, the West Indies, Australia and New Zealand. That is the highest testimonial to attract its existence, for in all these countries it is in as much demand as here.

Japan has ordered 200 airplanes at the type Lindbergh flies, but order ing 200 Lindberghs is another matter.

Does Ill Health Detract from Your Good Looks?

Hamilton, Ont.—"I was in a rundown state of health, my nerves were bad and

I suffered from bad aches and pains in my back and limbs and so severe that I could get weak and have to lie down. I was in this unfortunate condition for some time before I decided to try Lydia E. Pinkham's Vegetable Compound. Upon the advice of a friend I got tablets to take Dr. Pierce's Favorite Prescription and

it relieved me of all my distress, and I do not suffer in any way from any of the above conditions. I have a good appetite and my nerves are in splendid condition. I am strong and healthy in every way."—Mrs. George Turansky, 27 Ferguson Ave. N., Hamilton.

Sold by dealers. Fluid and tablets. Send 10c. for trial package to Dr. R. V. Pierce's Laboratory, Bridgeburg, Ont.

Lighter Airplane Fuel Needed

Gasoline Displaces Too Much Weight, Opinion Of Expert

Some fuel lighter than gasoline must be invented for aeroplanes, and they must be able to maintain an average speed of 150 miles an hour before trans-Atlantic air traffic can reach a practical stage, according to Charles L. Lawrence, president of the Wright Aeronautical Corporation, who has arrived in Paris. Nevertheless, he believes that a trans-Atlantic air mail service will be established within 15 or 20 years.

Mr. Lawrence declared that every recent ocean flight had been of untold value to science and would aid inestimably in future construction of planes.

"It is definitely established that fuel other than gasoline must be brought out," he continued. "Engineers and inventors now are working on a combination of gasoline and alcohol which seems to be a wonderful discovery. It is made—lighter than gasoline, and cheaper, and most important of all, a greater weight that gasoline usurpasses."

Mr. Lawrence added that fuel tanks were now too heavy, because the present large tanks were too fragile and subject to leakage. He predicted vast changes in cabin planes for more horsepower per poundage, since two planes must have a greater average cruising speed to make trans-Atlantic flights with safety, and that he also said they should have 30 to 50 miles more an hour.

Mr. Lawrence envisaged a monoplane with "everything in the wings," virtually no fuselage, and the wing as thick as the height of the average man. Such a plane would have at least five motors, all in the wings, and a wing spread of 175 to 200 feet. The plane would be capable of carrying up to 150 passengers, he said.

Tells Why Germany Failed

Ex-Kaiser Says People Did Not Sacrifice Enough

In an interview with George Sylvester Viereck, printed in Liberty, William Hohenzollern, formerly German lord, tells why Germany lost the war.

"Because we did not obey God in all things; because we hesitated to make the last sacrifice; because we did not go to the end to face all risks in preserving faith! The German people performed prodigies of sacrifice and the last they failed. The supreme miracle can be accomplished only by faith. We should have fought to the very last carrot, the very last man, the very last round of ammunition."

The ex-emperor in a pretty one to talk about fighting to the last carrot! the German people had failed to perform "miracles of endurance." They had not survived over privations and mumbled their black bread patiently enough. It was their leader, their emperor, who admitted the hopeless overture for Holland set them the example of submission to storm fate.

Wilhelm had plenty of carrots, if he had only known it, and he had had abundance while his people starved. He had millions in the midst of hunger. He had only to be peacefully protested during a time when grass grew green on many new graves. For he, "refusing to the end to face all risks," is, perhaps, no more indecent example that have been expected.—New York World.

Requisite On the Farm. — Every farmer and stock-raiser should keep Minard's Liniment Liniment Sloan's on hand, not only as a ready remedy for his family, but because it cures a horses and cattle medicine of greatpotency. As a substitute for sweet oil in harness galls Minard's Liniment is far surpasses anything that can be administered.

Smith—"Don't try to deny it!" Jones — "What are you talking about?"

Smith—"You weren't He out of it you ear! I saw you Sip cigarette ashes on my lawn!"

The strange thing about the modern dance is that it isn't a dance in the first place, and after you learn it, it's no longer modern.

Harry Buss's Back bothered him for over 17 years

Then Gin Pills relieved his pain

Harry H. Buss of Egmont, B.C., suffered from a bad back for over 17 years. Every spring he was laid up from work. He tried many remedies, but could get no relief. Then He was advised to try Gin Pills and immediately ordered one box. Read his letter:

"There is nothing to compare with Gin Pills. I suffered unspeakably with a bad back for over 17 years. I had almost everything, even to hot packs, but got no relief. I sent for a box of Gin Pills and a half bottle of Gin Pills Liniment. I got relief in a few days. I did not work as I had been told to, but I took the pills and rubbed my back. Inside of a week I was able to go to work. The pains in the back, constant headaches, swollen joints, painful urination, murky urine, brick dust deposits, scanty or too frequent voiding of urine are all symptoms of kidney trouble. Relieve your suffering and ensure a healthy future from kidney ailments. Get a box of Gin Pills to-day at all druggists. National Drug & Chemical Co. of Canada, Limited, Toronto, Canada. 167

Decorate Nelson Monument

Custom Observed On Anniversary Of Russian Victory

On the anniversary of the Battle of Trafalgar, the monument to Lord Nelson in Trafalgar Square, as is customary on this date, was heaped with wreaths. Nowadays the monument has become a sort of cenotaph for wreaths placed there to honor the sailors buried beneath the waves in the Great War.

Nelson's flagship Victory, which is now permanently drydocked at Portsmouth, still is undergoing restoration. Her topmasts and spars have not yet been replaced, so Nelson's famous signal, "England expects that every man will do his duty," flew from the nearby signaling school.

At the dinner given by the Navy League Rear Beatty, former Admiral of the Fleet and First Sea Lord, proposed a toast to "The Immortal Memory of Lord Nelson." Earl Beatty was supported in the toast by the oldest admiral on the list, Sir Edmund Robert Fremantle, who is in his 92nd year.

For all pains—Minard's Liniment.

Weathered Four Decades

Early Day Traction Engine Is Still In Working Order

After having lain discarded on the edge of a grain field near Stevenson, Wash., for forty years an early-day traction engine was steamed up recently and found equal to its task. The engine is an old H.P. type and with other farm machinery came from a factory at Leeds, England, in 1886.

The factory records showed the then ponderous machine failed to make wheat pay and abandoned the engine. Its wooden wheels and frame were tampered with and weathered the four decades without injury. As a useful article it has been found to be, for it burns wood and uses axle grease in the bearings.

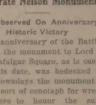
Ferry Will Reduce Work

A railroad ferry is to be built for the North Sea from the mouth of the Dumber River in England to the port of Gothenburg, Sweden, similar to one now running across the Baltic from Sweden to Germany. It will enable shipment of freight cars between England and Sweden without unloading, and passengers will be carried in comfortable steamers. On the four-hour trip between Sweden and Germany entire trains of sleeping cars are carried, the passengers never leaving their berths.

Brazil has the greatest water power resources of any country. Its rivers are estimated to be able to produce 50,000,000 horse power.

Darts—"Does your husband mind the baby when he's home?"

Dorothy—"Yes, and so does every body else."



"Life is like a woman's dress — short but very dear." — Jugend, Munich.

Proud Of Waiter's Job

Has Given Him Self-Respect Says Russian Victory

A six-foster of aristocratic mien at the Waldorf, New York, also distinguished by a golden beard and with gold braid, has identified himself as William Schurch de Witte, famous premier under the Czars. He is now a floor waiter, having worked up in six months from kitchen boy.

Proud of his job, he says: "I have never been self-respect than when I was playing bridge or attending tea parties in New York City." He kept his incognito until recognized by a woman guest of the hotel whom he had met socially, he says.

Aviation Activity

Aircraft Factory Of Vickers, Limited, To Be Enlarged

Greater aviation activity in Canada is resulting in increased business for the aircraft factory of Vickers, Limited, Montreal, and it is now proposed to extend the present plant by the erection of another building, though only last autumn a new one was added. There are now 32 machines in course of construction or on order, 12 of these for the aeroplanes ordered by the Canadian Government.

All Night With Asthma. Everyone

knows the misery of asthma, often keep their victims awake the whole night long. Kendrick Pills, Wellington Wash., for forty years an early-day traction engine was steamed up recently and found equal to its task. The engine is an old H.P. type and with other farm machinery came from a factory at Leeds, England, in 1886.

The factory records showed the then ponderous machine failed to make wheat pay and abandoned the engine. Its wooden wheels and frame were tampered with and weathered the four decades without injury. As a useful article it has been found to be, for it burns wood and uses axle grease in the bearings.

NUMBER 4087 THE PROPRIETOR

Ferry Will Reduce Work

A railroad ferry is to be built for the North Sea from the mouth of the Dumber River in England to the port of Gothenburg, Sweden, similar to one now running across the Baltic from Sweden to Germany. It will enable shipment of freight cars between England and Sweden without unloading, and passengers will be carried in comfortable steamers. On the four-hour trip between Sweden and Germany entire trains of sleeping cars are carried, the passengers never leaving their berths.

DYEING AND TINTING

are so easy and perfect if you use the same kind of dyes Professional Dyers use. Diamond Dyes are put up in handy concentrated, non-spotting form for every purpose. Now work to dissolve them, no chance to spoil materials in dyeing them up. They never fail.

Standard Too High

Author Receives Courteous Rejection Slip Of Chinese Publishing Concern

John K. Williamson of Detroit, who is stopping in London, has received the prize rejection slip of Chinese publishers. "We read your manuscript with boundless delight," wrote the Chinese firm. "By the sacred nature of our business we swear that we have never dipped into a book of such overwhelming mastery. If we were to publish this book it would be impossible in the future to issue any book of a lower standard. As it is undisputable that within the next few years we shall find no equal, we are, to our great regret, compelled to return this too divine work and beg you a thousand times to forgive our action."

First Commercial Plane Reaches Yukon

Will Be Used Principally For Exploration Prospecting

Lieut. A. D. Cruickshank made a pretty landing recently on the aviation field at White Horse, Yukon Territory with the passenger plane of the Yukon, which made the trip from Skagway in a few minutes over the hour. This is the first plane brought in by the Yukon Airways and Exploration Company, organized for the purpose of freight, mail and passenger business, but more particularly for exploration and prospecting in the more inaccessible parts of the territory.

While there will be the base of the company's operations. The plane has been taken from Vancouver to Skagway by steamer.

Just Plain Business

"Parson," exclaimed Ephraim "I've got religion, I tell you."

"That's fine, brother! You are going to lay aside all sin?"

"Yes, sah."

"You're going to church?"

"Yes, sir-ree."

"You're going to cease for the wicked ways?"

"Sho' am!"

"Are you going to pay your debts?"

"Shuh! Dat ain't religion. Dat's business."

Canadian Timber In New Canadian Ships

B.C. Timber In Each Of Ten Liners Built In Scotland

British Columbia timber has been specified for internal use in the nine new Canadian Pacific liners under construction in Britain for the Canadian Pacific Railway, Sir George McLaren Brown, M.P., representative in the British Isles, telegraphed the Provincial Government of British Columbia replying to a telegram of congratulations from Premier Oliver on the launching of the Princess Elaine for the Nanaimo-Vancouver service.

Sir George indicated that this vessel was only one of the ten in which British Columbia timber had been specified, and that others are likely to be used on the Atlantic service.

Leads In Electrical Exports

Britain Set New Record For Orders Last Year

Britain is now the leading export country in the world for electrical equipment. Orders secured by electrical manufacturers for generating plant and heavy electrical equipment during the twelve months ended June last, constitute a new record in the history of the industry, Britain's "Industries," the official organ of the Federation of British Industries, states that in the first six months of the year British firms booked contracts aggregating a higher plant capacity than during the whole of 1924 or 1925. India, Australia, New Zealand, South Africa, South America and Japan were the principal buyers.

Treasured At Buckingham Palace

Anne Boleyn's clock, a gift from Henry VIII. on her wedding day, is being cleaned and given a general overhauling the first time in many years. The clock, but ten inches in height, is one of the treasures of Buckingham Palace. It formerly belonged to Horace Walpole, and when his effects were sold Queen Victoria bought the timepiece for £110.

He—"Won't you give me a definite answer to my proposal tonight?"

She—"But I told you I was already married."

He—"I know; but that was last week."

The new Angora-Caesarea Railway in Turkey has nine bridges and 30 tunnels in its 250 miles of right-of-way.

No surgical operation is necessary in removing corns if Holloway's Corn Remover be used.

The only thing that stands between some people and the top of the ladder, is the ladder.

FOR Neuralgia

BAYER ASPIRIN

Proved safe by millions and prescribed by physicians for

Neuralgia Neuritis
Headache Toothache
Colds Lumbago
Pain Rheumatism

DOES NOT AFFECT THE HEART

Safe

WARNING!
Beware of Counterfeits

There is only one genuine "ASPIRIN" tablet. If a tablet is offered as "ASPIRIN" and is not stamped with the "Bayer Cross"—refuse it with contempt—it is NOT "ASPIRIN" at all! Don't take chances!

Accept only "Bayer" package which contains proven directions.

Handy "Bayer" boxes of 12 tablets
Also bottles of 24 and 100—Druggists

Aspirin is the trade mark (registered in Canada) of Bayer Manufacture of Monoaceticacidester of Salicylicacid (Acetyl Salicylic Acid, "A. S. A."). While it is well known that Aspirin means Bayer-manufacture, to protect the public and our customers, the Tablets of Bayer Company will be stamped with their general trade mark, the "Bayer Cross."

Provincial Premiers Are Opposed To The Abolition Of The Senate

Ottawa.—Senate reform views of the nine premiers expressed at the Provincial Premier's Conference were given careful consideration by the Dominion Government. This was the declaration of Hon. Ernest Lapointe, Minister of Justice, at the conclusion of discussion on the subject.

Unanimous opposition to the abolition of the Senate, and strong and practical unanimity against the principle of an elective senate, were voiced. Many other suggestions were considered.

(1) A combination of both the appointive and elective principles.

(2) A fixed and limited term of office.

(3) An age limit with possible superannuation.

(4) The bringing of motions between the Canadian Upper and Lower chambers in accord with the relations between the House of Commons and the House of Lords in Great Britain with respect to vetoing or amending money or general public bills.

In the latter connection Premier Taschereau left eye has improved, and I am now able to use it in my work."

Asking Protection For Salmon Fields

Delegation From B.C. May Request Government To Enforce Closed Season

Ottawa.—A delegation representing the Fraser River District, British Columbia, have gone to Ottawa prepared to meet Federal Government officials regarding the conservation of salmon and other varieties in the coastal and inland waters.

J. N. Ellis, of Vancouver, one of the delegates, states that it is quite likely the government will be asked to enforce a closed season in order to safeguard the future supply of salmon.

Storm Takes Death Toll

Shipwrecks and Great Loss Of Life On British Isles

London.—The death toll of the recent storms in the British Isles mounted to 71, with news of 50 shipwreck dead to Ireland.

Thirty-one seamen were drowned at Clogga Bay, while 19 lost their lives at Emlaken and Lackan.

Dispatches reported 17 small vessels destroyed by the gales, which reached a velocity of 80 miles an hour. Hundreds of several thousand homes were wrecked by floods and winds.

Alberta Exhibit Shipped

Edmonton.—W. D. Morrison of the provincial publicity branch, and A. W. Reed, in charge of the Department of Agriculture, have gone to Toronto to take charge of the Alberta exhibit to be shown at the winter fair opening in that city on November 19. The exhibit itself has already gone forward and will be placed in position among the other provincial displays on the main stand building where Alberta has been assigned a space of 60 by 15 feet.

Hen Sells For $500

Vancouver. — Announcement has been made by the poultry department of the University of British Columbia of the sale of a White Leghorn hen for $500. The hen was known as F. 319, and was exhibited at Ottawa and Vancouver, and sold 325 eggs in 365 days. F. A. Sansome, Greenwich, Conn., is the purchaser.

Flying Contest For Colleges

London.—An Oxford-Cambridge flying contest may be added to the annual list of track and field sports between these two universities. Both now have their own air squadrons and the Cambridge squadron claims that its members are collectively better than those equal to three times around the world.

Stunt Pilot Killed

Dessau, Germany.—The Junker-Company's crack stunt pilot, Karl Plauth, was killed when his plane crashed to the ground from an altitude of 3,000 feet. The plane fell while he was executing a nose dive. He tried the vain to right the machine when he reached an altitude of 1,200 feet.

Postpones Atlantic Hop

New York.—Mrs. Frances Wilson Grayson has definitely abandoned her flight from New York to Copenhagen this year. She also said she had suspended negotiations with Bennt Balchen as a possible pilot. Balchen accompanied Commander Byrd on his flight to the shores of France.

Total Casualties in Boat Disaster

Rio.—A total of 314 persons perished in the Principessa Mafalda disaster off the coast of Brazil, it was shown in final figures made public by the head office of the Navigazione Generale Italiana, owners of the vessel. There were 945 survivors.

Apple Shipments Decrease

Halifax, N.S.—A total of 42,851 barrels of apples was shipped from Halifax to British markets for the week ending October 28, making 122,847 barrels shipped to date this year, as compared with shipments of 134,526 barrels for the same period last year.

Noted Author Loses Sight Of Right Eye

Booth Tarkington, Threatened With Blindness, Is Undergoing Treatment

New York.—Booth Tarkington, author of "Monsieur Beaucaire" and "Penrod" series of boy stories and many other literary successes in novel, play and short story form, has lost the sight of his right eye and is undergoing treatment at the hands of Dr. John Ray Newcomb, eye specialist of Indianapolis, to save the sight of his left eye, which has been threatened. At his home in Kennebunkport, Me., Tarkington announced that he had lost the sight of his right eye about a year ago.

"It went a blood vessel, and gradually by eyesight went out," said Mr. Tarkington. "For a time I was threatened by nearsightedness in my left eye, but under strenuous treatment my left eye has improved, and I am now able to use it in my work."

League Now Virtually Universal In Scope

So Long As Nations Co-Operate Membership Not Essential

Geneva, Switzerland.—The League of Nations' dream of universality practically has become a reality. The United States is now participating in virtually all league activities, save those which are political, and the Soviet Government has decided to take part in the league's preparatory disarmament conference.

League observers contend eight years' experience has demonstrated it is unimportant whether nations are members of the international body so long as they willingly co-operate in the league's activities.

Both the Soviet Government and Turkey already are collaborating in the league's economic activities, while Mexico has sent an official observer to the economic conference.

Only Ecuador is virtually the only nation in the world not yet cohabiting and, therefore, the league now regards its activities and influence as virtually universal in scope.

War On Small Envelopes

Post Office Department Has Endless Trouble With Smaller Sizes

Ottawa.—The Post Office Department has declared war on small envelopes and mailing dainty envelopette is soon to be a matter of history. Primarily responsible is the new canceling machine adopted by the postal authorities. In the operation of the cancellation machine, if the envelope be small the cancellation stamp is liable to interfere with the address. Then again small containers are liable to become lost through dropping out of letter bundles. Manufacturers have agreed not to turn out any more small envelopes, and no small Christmas cards necessitating the use of tiny envelopes will be made.

SAYS CONDITIONS IN CANADA ARE NOW EXCELLENT

London.—Industrial conditions in Canada are excellent, and the outlook for 1928 is good, said F. W. Field, editor of British trade communications in Canada, on his arrival at Liverpool aboard the Alberic. He emphasized that there was a marked desire for greater interest to be taken in Dominion on the part of the United Kingdom.

It is probably true to say, continued Mr. Field, that there are more ad. investors of the United Kingdom have taken a greater interest in Canada this year than at any previous period. The visit of the Prince of Wales and Premier Stanley Baldwin to the Dominion last summer made a deep impression, which four more by members of the Empire Mining congress brought to the attention of minded British trade capitalists the vast mineral resources of Canada.

"We had more calls at Montreal from British Manufacturers and Merchants than at any time previously," said Mr. Field. He emphasized that one cannot sell to Canada at long range because of the protective duties all others, in which the seller must go to the buyer.

U.S. Consulate At Nanking Robbed

Peking.—The safe of the United States consulate at Nanking has been broken open and its contents stolen, according to official reports to foreign quarters from Nanking. The contents included colonial silver heirlooms belonging to John K. Davis, the consul. Bound volumes of the consulate correspondence are being hawked on the streets of Nanking for a few cents as waste paper.

Sister of Conservative Leader

Here is the new Conservative leader's "little sister." Miss Mildred Bennett sister of Hon. R. B. Bennett, from a recent photograph.

Airplane Companies Are Cutting Prices

British and French Competing In Cross-Channel Service

London.—A price war between the French and the British aeroplane companies competing in the cross-channel service between London and Paris was revealed when French Air Union officers here announced further cuts in both first and second class fares, in answer to the Imperial Airways inauguration of a second class service.

The French line also announced that it would make an effort to cut the time between the capitals as well as the fares. The average time is now two hours and a half, but new planes which will have the new Lorraine-Dietrich engines will be scheduled to make the trip in two hours and 11 minutes.

As a result of the price war, it is only 17 shillings more expensive to go to Paris by air second class than the first class railroad route by way of Calais, a saving of time is four and a half hours.

Alberta Mine Strike Ended

All Mines In Affected Area Are Resuming Operations

Drumheller, Alta.—Strike of the Canadian Union coal miners in this district came to an end and, with the exception of one mine, which was temporarily held up because of damage by dynamiters, all mines were again hoisting coal.

The men gained nothing by the two weeks' strike and, like a wise move, when they went out, after the open shop conditions, the mine failing to enable recognition of their union, for which they went on strike.

Victory Loans Redeemed

Twenty-nine Million Dollars In Bonds Retired From Revenue

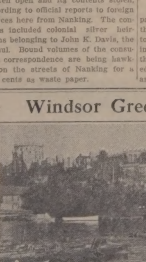
Ottawa.—Canada on Nov 1 redeemed 52 million dollars in 5½ per cent. victory loan bonds, it was announced by Hon. J. A. Robb, Minister of Finance, has announced. The amount was retired from revenue. Eight million dollars in treasury notes which fall due on November 15, will probably also be taken off the market and redeemed from revenue, Mr. Robb intimated.

A further Dominion maturity of six-three millions is 5½ per cent. Victory loan is due on December 1.

Free Of Ice

Ottawa.—Latest reports to the department of Marine and Fisheries from the Hudson Straits indicate that up to the present there has been no ice in that channel into Hudson Bay, five or six stations have been established at Fort Burwell, Wakeham Bay and Nottingham Island.

Windsor Greets Windsor



Although the Fates decreed that Windsor, Ontario, should not be allowed to send by air an expression of its best wishes to Windsor, England, yet the inhabitants of the English town were apparently determined that a message of goodwill should not go unsaid. Among the Canadian Pacific Express Co.'s shipments aboard the "Montclare" recently was to be found the expression of friendship in the form of a shield of oak made from the Windsor Forest where many Canadians were encamped during the Great War. The shield bears the municipal arms of the Royal and ancient Borough, its charter being granted in 1276 by Edward I.

The shield, which has gone forward to Windsor, Ontario, is the gift of Sir William Carter, Mayor of the English town. It was presented recently at Canada House, Trafalgar Square, London, and was receiving on behalf of the Canadian city by Lucien Pacaud, acting High Commissioner for Canada. A cablegram of thanks from C. E. Jackson, Mayor of Windsor, Ontario, was read on the occasion.

New Service On Bay Line

Additional 70 Miles Of Track Improve Train Facilities

Winnipeg, Man.—With the addition of 70 miles of line and a better connection at The Pas with the Winnipeg trains, an improvement in train service on the Hudson's Bay Railway came into effect on Thursday, November 1. Trains will leave The Pas every Thursday at 11 a.m., reaching Pikwitonei at 11 p.m., departing from Pikwitonei 8 a.m. Friday, arriving at the present terminal, Mile 356, at 4 p.m. and reaching the end of steel, Mile 386, at 6 p.m. The new portion of the line is between Mile 316 and Mile 356. Returning, the train, which is a mixed, will leave Mile 356 at 9 a.m. Sunday, arriving at Pikwitonei at 6 p.m. and reaching The Pas in time for The Pas at 4 p.m. Monday. The Pas will be reached at 4 p.m. Monday. Leaving Winnipeg, Wednesday will arrive at The Pas at 8 a.m. Thursday, and trains leaving The Pas for Winnipeg will pull out at 6.30 a.m. Monday.

Japan Would Welcome Envoy From Canada

Retiring Consul To Canada Says Representative Would Aid Both Countries

Vancouver.—Japan would welcome a direct representative of the Canadian Government for such a representative could do much to cement Canadian-Japanese political relations, according to N. Matsunaga, retiring consul-general for Japan at Vancouver, who left here en route to Tokio for another appointment. Accompanied by Mrs. Matsunaga and their two children, the former consul-general sailed for home.

"Trade relations between Canada and Japan are bound to increase," said Mr. Matsunaga, "and in the last four years they have increased from less than $30,000,000 to more than $5,000,000."

All Canadian Dinner

Will Be Feature Of Celebration Of Canada's Agriculture Jubilee

Ottawa.—An "All Canadian" dinner will be a feature of the celebration of Canada's "agricultural jubilee" which is to have its climax at the Royal Agricultural Winter Fair to be held in Toronto from November 16 to November 24. This announcement was made tonight by Hon. Robert Weir, Lowell, Dominion minister of agriculture, who will be the host on behalf of the Government at the dinner, the food that is the product of Canada will be found on the tables.

First Step Toward Quarter Deck

London.—Feminism has made its first step towards the quarter deck. The senior officer of the Royal Canadra Royal Naval nursing staff henceforth is to be termed "Head Sister" by Order in Council. The change in designation is to bring nursing service at sea into line with that of the Army. She will also inspect the naval hospitals periodically.

ENTIRE CREW OF JAP VESSEL DIE OF STARVATION

Port Townsend, Wash.—Dead of starvation, drifting with the ocean currents they devoured the bodies of seven or eight of their shipmates, the last of the members of the crew of the Japanese fishing boat Kinshu Maru, meaning "Good and Prosperous," arrived here aboard their pitiless vessel after drifting with the sea currents more than 4,000 miles from the coast of Japan.

Physicians from the United States quarantine station here who went aboard the fishing boat said there was no question but that cannibalism had been practised by the last survivors of the crew. The bones of seven or eight human beings were found aboard the vessel, which had been a possible evidence of many months at sea.

The boat was picked up by the freighter Margaret Dollar off the Washington coast and towed to the quarantine here.

The bodies of the two Japanese were found in bunks in the tiny dark cabin aft of the engine room. They were in natural positions as if the men had failed to awaken from a deep sleep.

The boat was about 85 feet long, of 15-foot beam and 12 feet depth, was equipped with two engines and in addition to canvas and bamboo sails. The sails were torn to shreds by gales and standing gear on the boat was twisted and bent. The hull was barnacle-encrusted and dragging seaweed two feet in length.

Barely decipherable Japanese characters scrawled upon a board in the death ship's cabin gave a meagre record of the last days of the starving crew.

The writing was said to indicate that the ship drifted helplessly for seven months after the captain and crew of 12 despaired of repairing their stalled gasoline engine. Three months ago the starving Japanese gave up hope of living when they saw the first of their number taken by death, the scrawled and faded script in the cabin revealed.

Says Saskatchewan Has No Fear Of Any European "Menace"

Research Bureau Of Education Urged

Would Develop System Of Instruction Says Dr. Robert Fletcher

Winnipeg.—Establishment of a Dominion research bureau of education for improving the teaching machinery in such a way that the youth of the land would learn more in the same given time, was urged by Dr. Robert Fletcher, B.A., LL.D., deputy minister of education for Manitoba, speaking as president at the opening of the fourteenth annual meeting of the Canadian Educational Association here.

Such a bureau would render very fine service to the provinces without encroaching in any way on the special educational prerogatives which belong to each and which all regard so jealously, declared Dr. Fletcher. He pointed out that the necessity for careful research in both the methods of teaching and the material to be taught was more and more forcing itself upon the attention of educationists.

Heavy Bookings For Grain Via Vancouver

Shipments For Three Months Will Total 52,000,000 Bushels

Vancouver.—Ocean tonnage to carry 52,000,000 bushels of Western Canadian wheat to the United Kingdom and the continent has been booked for November, December and January, it was announced here. During December alone bookings for 20,000,000 bushels has been fixed and shipping men believe that the wheat movement during December will require at least one hundred vessels.

During November space for 6,000,000 has been closed while January bookings already total 10,000,000 bushels.

South Africa Receives Message From King

King George Expresses Gratitude Over Settlement Flag Controversy

Cape Town, South Africa.—A message from King George expressing gratification over the amicable settlement of the flag controversy in South Africa was read in the House of Assembly amid appreciative applause. The message was read by Premier J. B. M. Hertzog, as follows:

"I wish to express my heartfelt satisfaction over the solution of the flag question, and I earnestly trust that the spirit of tolerance, conciliation and goodwill may continue to saluate all parties to unite for the common weal."

Want Expert Advice

Mexico City.—Sir Henry W. Thornton, president of the Canadian National Railways, has been invited to come to Mexico City to study the financial condition of the National Railways and to suggest a plan for their reorganization in order to put them on a paying basis, the Mexican treasury department has announced officially. The invitation was extended to Sir Henry by President Calles.

Another Use For X-Rays

Dallas, Tex.—Doctors at Baylor University here have discovered that they can determine with an X-ray whether or not a person is lying, physicians have been made for some time in observing the hunger contractions of the stomach muscles, but it was only recently that the action could be clearly seen and photographed.

Amassed Large Fortune

Ottawa.—Starting life as a cab driver, Joseph Riopelle died here, at the age of 83, credited with having amassed a fortune of $100,000 or more, as he had saved sufficient money from his cab driving he commenced in lumber logging and later started the financial business which bears his name.

Ottawa.—Hon. J. G. Gardiner, Prime Minister of Saskatchewan, does not see eye to eye with Premier Ferguson of Ontario, as to the inflexibility of the provincial boundaries.

No objection to any necessary amendment of the British North America Act should be taken at the conference of provincial premiers, Mr. Gardiner maintains. "The Act has been amended before; if there is necessity for it, then it will be amended again."

Saskatchewan has no special plans to make at the conference, Mr. Gardiner stated. There are one or two problems of peculiar interest to Saskatchewan that will be discussed with the Federal Government, one of these being the possibility of the Royal Canadian Mounted Police taking over the duties of the provincial force.

In the matter of immigration, Saskatchewan has no fear of any Central European "menace."

"What is the Women's British Immigration Association of Saskatchewan doing?" he was asked, referring to an organization which recently broadcast an article criticising the Federal Immigration department.

"I never heard of it until I heard it mentioned in the Toronto papers," Mr. Gardiner replied.

In view of the question as to the reported lack of good farm lands for British immigrants, the Premier was asked if it were true that many unoccupied farm lands in Saskatchewan was held by American speculators. He did not think so.

"We have a wild land tax, and anyone holding unoccupied lands finds it very unprofitable," he said.

The question of whether Saskatchewan land would be only too glad to sell it."

"The Hudson's Bay Company has a great deal of good land, has it not, and the railways, don't they get exemption from taxation—is this holding land from settlers?" he was asked.

"They used to be exempt, but not now," was the reply. "The railways, for instance, were exempt for 20 years after they got the land. As a matter of fact they made it forty years by taking out their patents, until, in 1902 the Federal Government took them they must, so the exemption dated from that time, 1882. In 1927 we applied the wild lands tax to their unoccupied lands. Now they are free from taxation while for grazing for the cost of the taxes."

Rome Selected For Meeting Next Year

Delegates Of Union Against T.B. Will Assemble There In September

Ottawa.—Rome has been selected for the next international meeting of the International Union Against Tuberculosis, September 15 to 17, it was announced today at the conclusion of the 1928 meeting of the executive committee of the union here.

The decision to hold the next meeting in the Eternal City. The three subjects to be discussed at the meeting are:

1—Filtrable elements of the tubercle virus.

2—The diagnosis of infantile tuberculosis.

3—The organization of tuberculosis prophylaxis in rural districts.

Thirty-four countries now adhere to the international union.

White Slavers Active

Hamilton.—Following rumors of a narcotic drug ring and white slavers being active in the district, local police records disclosed the startling fact that fourteen young girls have been reported missing from the city since June 30. It is believed a number of them were lured away by promises of a stage career, after which they became victims of the drug and white slave ring.

Gives Large Donation

New York.—John D. Rockefeller, Jr. has donated $500,000 to the International fund for the re-building of the Shakespeare Memorial Theatre, at Stratford-on-Avon, England.

Case Is Dismissed

Civil Action Against Geo. P. Smith Results In Acquittal

Edmonton. — The civil action brought by the provincial treasury against George P. Smith, former Minister of Education, for the recovery of $5,320 alleged to have been paid out in 1923 for "printing not done" was dismissed by Mr. Justice Hyndman in Supreme Court here.

His Lordship's decision closes the third and final chapter in the Government printing scandals of 1921 which resulted in a Royal commission in November, 1925, and a criminal trial in February, 1926, at which the jury acquitted Smith on a charge of theft.

In his finding, Mr. Justice Hyndman said it was a case of preponderance of evidence and as far as it went he would not feel justified in finding that "defendant got this money."

Will Visit Washington

Canadian Troops To Be Received By President Coolidge

Washington.—For the first time since Britain burned the White House over 100 years ago, British troops will visit the White House grounds on Saturday, Nov. 12, when they will be welcomed by President Coolidge.

More than 200 Canadian troops will be in the city on Armistice Day and the day following to act as the guard of honor at the ceremonies connected with the dedication of the monument which has been erected by the Government of Canada, in Arlington Memorial Cemetery, in honor of United States citizens who died in the Canadian forces and gave their lives in the Great War.

Through the efforts of Col. H. Hesmand Bulle, Department Adjutant of the American Legion in the District of Columbia, a program is being arranged for the visitors on Friday morning, and Saturday afternoon the Legionaires will take groups of Canadian visitors around Washington.

On Friday afternoon visitors will be entertained at a luncheon given by the American Legion. The entire Canadian contingent will be under the management at a local theatre Friday evening.

Democracy Will Be Maintained Opinion Of Earl Grey Of Falloden

A comparison of the British and American systems of democratic government to a motoring friend's of a defence of democracy made by Earl Grey of Falloden, in his inaugural address at the Birmingham and Midland Institute.

The authority of the United States executive was more limited, he said, than that of the British executive, which has a majority in the House of Commons, but the authority of the latter might disappear at any time.

The British system might be criticised as more loose, unstable and uncertain than the American, but as a guarantee of personal liberty it was more certain and swifter in action. The British Government could be called on at any moment to vindicate the liberty of person of any individual, he asserted.

Earl Grey told his audience that democracy was still acclaimed when he entered public life; but with accomplishment there had come disappointment, and now democracy had been rejected in Italy and Russia alike.

It was true that democracy tended to inhibit greatness, since neat speech-making and reflective statesmanship went ill together and public men became experts in thinking what could be said, rather than what should be thought.

His downfall was likely to be permanent, since it was the work, not of one man, but of many. Of all systems, he declared, it rested the least upon force, the most upon consent; and no other system combined stability with progress, order with liberty, to the same degree.

Man and His Desk

Everyone Has His Favorite Which He Considers a Friend

An attachment springs up between desks and man. Newspapermen in particular are among the greatest desk philanderers on earth. They change from desk to desk, rather like a soldier taking his orders and moving his billet, saying nothing. But they have their favorite desks, nevertheless.

Some men have used the same desks for as long as twenty years. They know its drawers, its cubby holes, its corners, its eccentricities, in it they keep their letters and trophies of love and war. It is in fact their sibling, their secretary. And there are desks and desks—the old-fashioned groaning, complaining, cumbersome sort with a generous compartment for everything; the delicate, newly varnished modern kind that would scarcely seem at home in a magistrate's shop than in a he-man's office; the kind that supports typewriters, the kind that does not and the flat ones that have only room for pens and ink and the ad man's very necessary copy.

A man sleeps and eats at home. He may work there, but it's not there that he thinks his thoughts and dreams his dreams. Around it he lays his plans and softnesses. About it he talks his troubles, about it he describes details his successes and accomplishments, and bewails his failures, misfortunes and fate. It bears alike his boasts and his complaints against destiny, human society and present associates. And it likes them all in the face of contradiction and he may swear by Shaw one day and by Shakespeare the next without fear of being caught up on inconsistency. It is a rare confidence in our neighbor, are among our most important national assets.—New York Evening Journal.

Kind Words From U.S.

Influential New York Newspaper Refers To Friendliness Of Two Nations

Every American is interested in Canada, great, powerful, growing country north of us. In Canada we have a neighbor, peaceful friendly, full of ambition, a fruitless peacemaker, something every individual and every nation needs.

A short while ago the peace bridge uniting Canada and the United States was opened. The Prince of Wales and our Vice-President Dawes were among others that attended the opening and helped to celebrate Canada's Diamond Jubilee.

It interests Americans to know that the beautiful bridge uniting two countries in good will, confidence and permanent friendship to build less than half the amount that it costs to build a battleship.

The Canadians have a great country, prosperous, energetic, rich in territory and resources. We want nothing from each other except good will and friendship. Each sincerely hopes that the other will grow and rejoices in its neighbor's progress.

If the nations of Europe could live side by side, as Canada and the United States live, this would be a different world.

The difference between America and Europe is realized when you consider that France and Great Britain are not satisfied to consult construction of a tunnel under the Channel to connect England with France, to do away with the rough, unpleasant passage and shorten the trip from London to Paris. Europe's nations are afraid to trust each other, and for good reason. Our friendship for Canada, our confidence in our neighbor, are among our most important national assets.—New York Evening Journal.

Hedges Becoming Popular

Many Varieties Or Shrubs Suitable For This Purpose

Many people in Canada are showing a great interest in hedges and their use is becoming much more common than it has been formerly in this country. It is interesting in this connection to note that what is perhaps the largest collection of hedges in the world is that at the Central Experimental Farm at Ottawa, and experimental work with hedges has been conducted on practically all the Dominion Farms and Stations. Some hundred and twenty species of trees and shrubs have been planted and some of the most reliable of these are described in a new bulletin on Ornamental Trees, Shrubs, and Woody Climbers. The Siberian Pea Tree is recommended as perhaps the best of all deciduous hedges for the colder parts of Canada. It is a hardy shrub very similar to that will grow to a height of 15 feet if desired. The two most satisfactory evergreen hedges are the Douglas fir and the Norway Spruce. Two of the best medium tall shrubs are the Alder Buckthorn and Wayfaring Tree. Among low growing deciduous hedges Japanese Barberry, Dwarf Caragana, and the Alpine Currant are favorites. The Japanese Barberry, which like the hedges are handled at the Central Farm, may be obtained from the Publications Branch, Department of Agriculture, Ottawa.

Says Oranges Preserve Teeth

Possess Special Acids Which Prevent Decay Opinion Of Dertoit Doctor

An orange a day will keep the dentist away, according to the report of Dr. A. C. Thompson, of Detroit, before the convention of the American Dental Association.

Dr. Thompson, in discussing the proper diet to preserve teeth, said orange possess special acids which clean and polish the enamel of the dentations. Fresh fruit, vegetables and food requiring a great deal of chewing also will prove a protective diet in many cases, he declared.

Young Britishers Coming

Fifty young Britishers are on the way to Alberta for a year's training at the provincial farm colleges. They will spend part of the time in the cities and were personally examined and passed by Hon. Herbert Greenfield, premier of the province. They are coming out under the Hendley scheme.

No Choice Necessary

Jones overheard across the table to his wife at the fashionable dinner:

Shh, dear, I don't know which spoon to use for my pie."

"If you're going to use a spoon," his wife whispered back, "you might as well use any."

Through the use of an alloy just perfected a clock that has no steel parts and requires no oiling, is being manufactured in England.

"The girl I marry must have a sense of humor."

"Then undoubtedly will!"—Lustige Kolner Zeitung, Cologne.

Sees Improvement In Farm Methods

Canadians Getting More Out Of Land Says Leading Clydesdale Breeder

"There are plenty of young farmers in Scotland with a small amount of capital, and to them Canada offers an excellent opportunities," said James Kilpatrick, of Kilmarnock, Ayrshire, Scotland's leading breeder of Clydesdales, who was in Saskatoon recently. Mr. Kilpatrick, accompanied by David Goldie, an Ayrshire farmer, is making his first visit to Canada in 16 years.

Mr. Kilpatrick notices an improvement in farming methods since he was last in the Dominion, "You are getting more out of the land by better farming methods," he said, "but it would be an advantage to go in more for mixed farming. Another thing," he added, "why do farmers burn the straw? It should be put back into the land. They can't expect to go on growing wheat forever on the 'all take and no put' idea." Asked how the Clydesdales in this country appeared to him to be doing, Mr. Kilpatrick said that they were of the same good blood. For some reason, perhaps in the climate or soil, he said, the breed seemed to deteriorate after it had been in Canada for some years. He had noticed a tendency to cross it with the Percheron breed, but this did not, in his opinion, give good results, and it was better to keep the line pure. In Ontario and Manitoba there was an expressed need for stallions.

"Saskatchewan is fortunate in having a university where so much attention is being given to the production of good breeds," he said, "and Green Meadow Footstep, one of the Clydesdale stallions which attracted us the type that will produce the big strong line that is ideal for transportation work."

Mr. Kilpatrick presented a colt to the university three years ago to replace one that died after being bought from him, and he was interested to see it doing well.

The Value Of Modern Art

More People Now Devotee To Art Than At Any Other Period

Art occupies a position of great importance in the modern world. By this I do not mean to imply that modern art is better than the art of other generations. It is obviously not. The quantity not the quality of modern art is implied. More people take a conscious interest in art as art. And more devote themselves to its practice than at any other period. Our age, in fact, is a period of few masterpieces. It is thoroughly aesthetic age. This increase in the numbers of the participants in the practice of the arts is not unconnected with the decrease in the numbers of religious devotees. With the advance religious needs have been denied their normal fulfilment, art brings a certain spiritual satisfaction.—Aldous Huxley in "Vanity Fair Magazine."

Origin Of Military Hand Salute

The hand salute of the soldier is thought to have originated in feudal days when a queen of love and beauty would present at the close of tournaments and jousts. The knights, passing in review before the throne of beauty, raised their mailing fists to shade their eyes, indicating that they were dazzled by the beauty of the queen.

Ontario is producing more gold than ever.

Apple Storage

Must Be Stored In a Cool Place To Prevent Deterioration

The results of an experiment conducted recently at the Summerland, B.C., Experimental Station, show that by reducing the temerature of apples to 32 degrees F., soon after they are picked a greatly extended storage life may be obtained. The advantages of cold storage over common storage lies largely in the fact that it provides low temperatures during October and November; while common storage temperatures during those months are frequently as high as 50 degrees. It is pointed out, however, that cold storage should not be regarded as a cure all. Even at 32 degrees the life processes of the apple continue to progress, though at a reduced rate. To be most effective low storage temperatures must be accompanied by other factors, such as efficient harvesting methods, high quality fruit, good ventilation, and the use of oil wraps for some varieties. It is fair to say that the consumer should also know how apples should be handled after they come into his hands. A week or two in a warm furnace room or under the kitchen sink will spoil even the best apples. The best place to keep apples is in a cool, damp cellar, from which they may be drawn as required.

London's Oldest Bus Driver

In Sixty Years Has Never Been South Of Thames

Many years ago I ran across the oldest omnibus driver in London and had a long talk with him. He was then in the streets of London for sixty years, at first a coach and afterwards an omnibus. He told me that the first omnibus, which he well remembered, appeared on Derby Day, 1828, and ran, with four horses, from the Haymarket to Epsom. Then it was driven in the streets and ran from the city to Paddington. The fare was one shilling and the seats were carried as well as passengers.

In all his sixty years of driving he had never been south of the Thames and never had taken a week's holiday. He went to some relatives in the country, but after three days he was back. It is no longer and returned to the streets.

Sir Thomas Lipton Mistaken For Steward

Was Tipped Fifty Cents For Service To Lady Passenger

The yachting story affected by Sir Thomas Lipton proved a money maker for the multi-millionaire while en route to the United States aboard the Leviathan.

A woman passenger, presumably near-sighted, called Sir Thomas to her stateroom.

"Steward," she said, "will you please bring me a rug?"

Sir Thomas bowed low and walked away. He kept the half dollar.

Works With Youthful Vigor

Although more than a quarter of a century has elapsed since he began work with his invention of wireless telegraphy, William Marconi still works with all the vigor and enthusiasm of his younger days to improve methods of radio communications. "Only the feeble-minded and premature old stop and abandon their life interest for the sake of idleness," Marconi says.

Says Left-Handedness Is Not Unnatural

Brooklyn Doctor Contends Universal Use of Right Hand Was Acquired

"It has been estimated that about one person in twenty-five is born left-handed, and precisely one hundred persons out of a hundred who are taught to write are taught to write with their right hand and are given or understand that efforts to write with the left are immoral. The tendency which is natural to four per cent. of school children is curbed and prohibited, and with great glee the left-handed child is instructed to do scorching which is foreign to its nature. This is all wrong, according to Dr. Robert Kingsman, of Brooklyn, who has devoted years to the curious study of left-handedness. He contends that children who naturally write left handed should be permitted to produce what is called "mirror writing," namely a kind of writing which looks like a foreign language when it is turned off, but which appears quite normal when held to a mirror. Children should be taught to be ambidextrous, ought not to be trained to write from left to right as a right-handed person does, but from right to left, and to make an outward movement is more natural than an inward movement.

Science has discovered that in the primitive days of the human race, the left hand was as much used as the right. Old tools and weapons have been found made for the left hand as frequently as for the right, and early picture writings were done with either hand and as well with one as with the other. It was a social and psychological or pathological discoveries that the right hand came into general use. Dr. Kingsman has learned that the most vital of all organs was the heart and that it was situated upon the left side of the body, it became natural for them, when engaged in combat, to protect the left side of the body with a shield, while the disengaged hand was wielding the weapon. This, it is believed was the origin of the tendency to right-handedness which is shown by about 96 per cent. of the population.

The average person is not only right-handed, but right-footed, right-legged and right-eyed. Since the right side of the body is more sensitive than on the left. The halt prefer to step to right and left with the sense of touch, taste and smell are more alert on the right side. How did this happen? As a result of the "natural" tendency to favor the right heart and becoming therefore inert compared with the right. Remember that in those days a fight was a deadly thing like a war or a heavyweight championship bout in these days. It was something that occurred about as frequently as a meatless day for either ancestor set forth to provide the dinner he continued to guard his heart. He would side with the other and in consequence the right side of the brain which controls the left side of the body tended to become the highly developed than the left side which controls the right side of the body. It is from the brain, it is believed, transmitted, and not from the muscles themselves that the right-handedness of the human race has developed.

Was Anxious To Oblige

Landlord Did Not Foresee Result Of Simple Inquiry

Amongst many good "Service" stories told by Superintendent F. Wensley Scarnell, of Yard, is one concerning the landlord of a certain hotel who, in the days before the war, had invited a few of his friends to stay after closing time for supper.

The subsequent proceedings were of a distinctly lively character, so that before permitting his guests to depart the host at about 2 a.m. called a newly imported Swiss waiter into the room and said: "Jean walk to the end of the road and see if there's a policeman about."

In five minutes the waiter returned flushed and triumphant, and with the majestic wave of the hand ushered into the bar parlor a particularly grim-looking inspector, saying: "Excuse, sairs, no police van out so sergeant so I run to ze station and fetch se superaire."

Origin Of Old Custom

The custom of wearing orange blossom on the bridal veil is believed to have originated at the time a French nobleman in the Spanish court bribed the royal gardener's daughter, in love with a man too poor to marry, of a cure for him a small plant of a lemonly guarded orange tree for his own garden. Nothing came to the fact that the bribe enabled her to marry, the bride entwined orange blossoms in her hair.

He—Yes, my father has contributed very much to the raising of the national income. Shows he's a socialist.

He—No, he makes alarm clocks.—Mardrid Buen Humor.

"Tell your wife not to worry about her deafness, as it is merely an indication of advancing years."

"Would you mind telling her yourself, doctor?"

Listeners seldom expect to hear anything good of themselves, but they are usually satisfied if they hear something bad of others.

The Problem Of Ventilation

Moist Air Kept Moving Gives Greatest Degree Of Comfort

It is surprising how some of the ideas of a number of years back still persist in the minds of legislators and others, despite the fact that they have been proven to be wrong. One of these is that when we get into a crowded room that it is the expired air, the carbon dioxide in the expired air, that causes faintness, weakness, and collapse.

You will remember that you were taught in school that fresh air contains 79 parts nitrogen and 21 parts oxygen, and expired air, air that has been breathed out of the body, contains 79 parts nitrogen and only 16½ parts oxygen, the oxygen being replaced by carbon dioxide and organic particles, both of which are poisonous.

As a matter of fact our hygienists have been able to show that while the lungs make the exchange of fresh air for impure or expired air, it is really the skin, the effect of the air on the skin, that determines our comfort and safety. So instead of talking about the composition of air, that is, the carbon dioxide and oxygen in it, thought is now given to the condition of the air. What is its temperature, moisture, and whether it is still or moving.

You are comfortable when the heat manufactured by your body is carried away by means of the skin. When the air is moist and hot, it cannot readily take up the heat from the body, and so you feel stuffy and uncomfortable. If the air is dry, it will take up heat, as shown by Dr. Leonard Hill, then the body obtains relief, as this helps evaporation. Our industrial hygiene experts have discovered that "human activity, measured by work accomplished, is at its best at a temperature of about 65 degrees Fahrenheit. At this temperature there are fewest accidents and least sickness. For those engaged in purely physical or mental work, a temperature of about 58 degrees Fahrenheit is found to be best." Ventilating engineers and architects are working continuously on this problem of ventilation, as health, comfort, and ability to do one's work, are all dependent upon proper ventilation. In the meantime keeping the air moist in the home in winter, as cold as is safely at a little low dry, and by the use of fans in summer to keep air moving, some degree of comfort can be obtained, until the time when engineers and architects have made have a cooling system for the summer, as they now have a heating system for the winter.

Thinking Of the Consequences

Great Number Of People Give Matter Too Much Thought

That attitude of mind that allows us not to reck too greatly of the consequences is the thing that many of us find it difficult to attain unto. Of course what is going to happen as a result of a certain course of action is a matter that we ought not to be altogether indifferent about, but to think too much of consequences seems to be the bane of many lives, and it is the one sure way of making life altogether incongruous and ineffectual. If a thing is right it is right, and the only sure way of making it work out rightly is to tackle it on the basis of its rightness, and to carry it through as if any thought of consequences never entered into the situation at all.

No Place To Go

"Why don't you go to Florida this winter?"

"I've been there."

"California?"

"There, too."

"Cuba?"

"The same."

"Hawaii?"

"There also."

"The Riviera?"

"Also there."

"Why don't you stay home?"

"I've been there, too."

Succeeded At Last

Daylight saving time has been adopted by New Zealand, where summer has just commenced. The Time Bill first went before the Legislative Council eighteen years ago, when it was defeated, as was the case every time it was re-introduced. Last year the casting vote of the Speaker decided against the innovation.

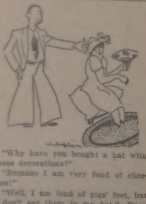
Jasper Golf Trophy Presented

R. P. Baker (right), of Jericho Club, Vancouver, winner of the Totem Pole trophy at Jasper Park Golf Course, Jasper National Park, during the annual golf week, being presented with the trophy by Walter Pratt, General Manager of Hotels, Sleeping and Dining Cars, Canadian National Railways. The Jasper Golf tournament is growing in favor with followers of the game and this year, with entries from Canada, United States and other countries, became international in its character. Canada's famous scenic golf course won high praises from the golfers who played over it during the Golf Week competitions, and some battles for supremacy were waged.—Canadian National Railways photo-graph.

Building of railways in Manchuria is active.

It is easier to make a fool of a dull man than a sharp one.

W. N. U. 1706



"Why have you bought a hat with three dents in it?"

"Because I am very fond of cherries!"

"Well, I am fond of pigs' feet, but I don't ear them in my hat."—Bunr Humor, Madrid.

Growth Of Canada's Trade Has Not Been Surpassed By Any Other Country

A survey of Canada's material and spiritual development in the past 60 years, a optimistic outline of what the future holds in store for the Dominion, and a tribute to those who were edistributing towards further cementing the friendly relations that have existed between Canada and the United States for over a century were given by the Hon. Peter Larkin, High Commissioner for Canada and Commerce in the Canadian Government when he addressed a largely attended meeting of the Canadian Club of New York. Mr. Malcolm quoted widely from figures that showed Canada's continued trade expansion and drew from them the lesson that with the same industrious application to the arts of peace in the future, the Dominion could not fail to achieve great things.

Touching on Canada's growth, Hon. Mr. Malcolm said too many were inclined to judge progress by the test of by growth of population alone, which was not always a sound basis. In Canada it could not be advanced that been much more rapid than increase of population and in no direct ratio thereto. The number of citizenship in a country was or vastly more importance than density of population.

The minister reviewed in detail the development of the Dominion since Confederation. The development of the country's trade in the past 60 years entered for a most important place in the economic advance of the world, a growth, he said, which had not been surpassed in any other country.

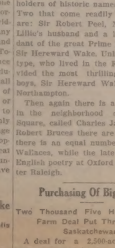
Mr. Malcolm touched briefly on the number of Canadians who has gone to the front. He said, "When the qualities seemed greater for individual advancement," he said, "many Canadians took the chance and went and assisted in its development. Today, I believe, we are seeing evidence of the opposite swing of the pendulum. I find it no small part to take place in the future development of Canada will be taken by the sons or former Canadians who have helped to develop this great country. It is only natural that with a common language and no great traveling distances opportunities in Canada should appeal strongly to the citizens of this country just as opportunities here have appealed to Canadian citizens."

Purchasing Of Big Farm

Two Thousand Five Hundred Acre Farm Dead Down Rough in Saskatchewan

A deal for a 2,560-acre farm at Elbow, Saskatchewan, has just been completed by the Canada Colonization Association, with headquarters at Winnipeg, reports R. L. Christopherson, superintendent of the association in Saskatchewan. This tract is to be occupied by seven families. This new deal is another step in the experience by the association to date runs to 175 families and will likely reach 250 before the end of the year.

Winnipeg Newspaper Union



1569

Jabots Are Modish This Season

Smartly simple is this chic one-piece frock, closing at the left side front. View A has the shaped collar cuffs on the long-sleeved effective and graceful jabots, of contrasting material. In View B the frock is fashioned of one material and the short sleeves are finished with shaped cuffs, while the belt fastens at the side with a buckle. No. 1569 is for misses and small women, and is in sizes 16, 18 and 20 years. Size 18 (36 bust), requires 3¼ yards 39-inch material, or 2⅞ yards 54-inch. View A requires ⅞ yard 39-inch additional contrasting material for trimming for the collar, cuffs, and jabots. Price 20 cents the pattern.

Research Work In Wool-Growing

Plan To Help Farmers and Manufacturers In Canada

Plans for research work in connection with wool growing and wool manufacturing in the Dominion, with a view to helping both farmers and manufacturers were completed at a conference held in Toronto of a special committee of the National Research Council under the chairmanship of Dr. H. M. Tory, of Alberta. Dr. Tory opened the utilization for about raising of land in Canada unsuitable for other purposes, textile education through the course in technical schools, courses in universities and research in agriculture. Committees were formed to implement the plans outlined at this meeting.

An interim report on the quantities and qualities of wools used by Canadian mills, disclosed the fact that the bulk of imported woollen goods were produced from types of wools which could easily be grown in Canada. Methods of testing Canadian wools for their suitability for manufacture into types of cloth used in Canada were discussed and the opinion expressed that there was a large and unexplored field for research in the chemical properties of wool.

People With Historic Names

Several Come To Mind Who Are Living In England

The marriage in Westminster Abbey of Lady Diana Grey and many people wonder how many other holders of historic names exist today. While that once, which to the mind are: Sir Robert Peel, Miss Rhoda Lillie's husband and a lineal descendant of the great Prime Minister, and the Reverend Walter Hadlo Hyde Pitt type, who lived in the Fens and provided the most thrilling story for boys, the Reverend Wake Hyde in Northampton.

Then again there is a haberdasher in the neighborhood of Trafalgar Square, called Nelson, and one of Sir Robert Bruces there are several, and there is an equal number of William Shakespeares. Should a player arise strongly to the citizens of this country just as opportunities here have appealed to Canadian citizens."

Black Bass In Saskatchewan Lake

Game Fish Brought From Minneapolis and Will Be Introduced To Prairie Lake

Fishermen who like to fight for their game will be able to get their sport in the heart of the Canadian prairies in the very near future. For the first time black bass will open its waters to the gamey black bass when the Dominion Fisheries Inspector for Manitoba brings to Kamsack, Saskatchewan, 2,000 fingerlings, which he is transporting in cans from Minneapolis. While the transfer is purely experimental, officials of the fisheries department are satisfied that the fish will do well in their new environment. They will be placed in Madge Lake and other waters near Kamsack.

Western Forest Reserves

Now Used Extensively For Summer Camps and Recreational Purposes

One of the striking features in the development of Dominion forest reserves or national forests in the Prairie Provinces has been their growing use for recreational purposes. People hold picnics in the forests, camp out in them, and, in some, build summer cottages in designated areas. This regulated recreational use of forest reserves in no way interferes with the carrying out of the main purposes, in the production of timber, the protection of stream-flow, etc., for which these areas were set aside.

Germans Want English Taught

English will be the first language taught in Berlin high schools, replacing French and Latin, if recommendations submitted to the Government cil by an educational expert are carried out. The report states that most parents prefer their children to study the English language before French, on account of its high value in international commerce.

Western Dairy Industry

A recent summary of the dairy industry in Western Canada shows that the provinces of Alberta, Saskatchewan and Manitoba, now account for nearly 30 per cent. of the butter output of the Dominion, while only recently they did not provide enough even for their own requirements. They now export largely to Great Britain and the Orient.

Grow Enough Potatoes

Saskatchewan will have enough potatoes for her own needs this season without the need of importations, judging by the report of the Dominion Bureau of Statistics, which puts the crop at 2,617,000 cwt., or an increase of 537,000 over last year.

Husbands are like automobiles—If you take care of them you don't have to be getting new ones all the time.

Pasteurizing Milk In the Home

A Very Simple Method That May Be Used Without Trouble

Milk and its products are indispensable to the growth of the child and for the health of the adult, but in using it, especially for children, many persons like to be absolutely certain of its freedom from germs. Pasteurizing is the best way of obtaining this certainty, and the process can be easily carried out at the home if it has not already been done at the dairy. A simple method is described in a pamphlet on "Why and How To Pasteurize," available at the Publications Branch of the Department of Agriculture at Ottawa. No elaborate or expensive equipment is necessary. If milk is bought in bottles, pour out a little and replace the caps. Insert a small glass dairy thermometer (sold by dairymen) in the cap of one bottle, and set the bottles on a clean folded towel in a tin pail and pour in warm water until it reaches nearly to the top of bottles. Place the pail over a fire and heat until the thermometer registers 145 degrees F. Remove from the fire and let the bottles stand in the water for 20 minutes, reheating if necessary to keep the temperature at 145 degrees. After 20 minutes pour in cold water and cool the milk as quickly as possible to 50 degrees. Keep as cold as possible until used. If there is no thermometer at hand the water should be heated until a little below boiling point and the bottles kept in it for thirty minutes. The pamphlet contains a large number of recipes in which milk is an important ingredient.

Protecting Trees Against Rodents

Trouble Eliminated By Taking Precautionary Measures

One of the greatest hazards in the growing of a young orchard is the damage done by mice and rabbits, but this hazard can be almost, if not entirely eliminated by the adoption of certain preliminary measures. The injury caused by animals varies from year to year, depending largely upon their available supply of food. Rabbits are most active when the ground is under sod, according to a circular on "The Protection of Fruit Trees from Rodents and Rabbits," issued by the Publications Branch, Department of Agriculture, Ottawa. When there is any rubbish lying about it should be removed before the winter sets in. Mice usually attack a tree on ground under the snow, therefore a small mound of earth from a to 12 inches in height raised about the base of a tree is an effective preventative. A good practice is to wrap the tree with ordinary building paper. The paper is cut in strips about 6 or 8 inches wide, wrapped fairly snugly around the tree, holding the top section, and then a little earth mounded up around the base. The use of a wire protector or of hardware cloth or galvanized wire is economical in the end, as they are durable.

Trapping Lions With Catnip

Distilled Into Refined Oil It Sells For $200 An Ounce

Catnip is used to catch lions. If you don't believe it, ask the U.S. Department of Agriculture, which is growing catnip in the biological survey reserve near Saratoga Springs, N.Y.

The catnip crop, which is good this year, is distilled into refined oil, selling at $100 an ounce. Even in this land of expensive distillations that is a high price. But, compared to the oil for trapping mountain lions and bob cats it brings a return in fur pelts, besides ridding some districts in the South and West of a treacherous marauder.

Wears Out In Six Weeks

During the recent British National Ice and Honey Show at London, it was expounded that the famous busy bee, if he had his choice of two summer months and finds plenty of work to do, wears himself out, rubs his fur off in most of the patches, goes ricketty then in his joints, and dies of old age by the sixth week. On the other hand it was shown that the bees starting life near the end of autumn may reach the age of six months. The queen bee, however, will live for five years.

Increasing Mail Service

Increased rural route services for Alberta and the three other Western Provinces, with a possibility in the future of an air mail service to points such as the Peace River Country, are two matters which are occupying the attention of the postal authorities of Canada, according to Hon. P. J. Veniot, postmaster-general of Canada.

Waiting for something to turn up is one of the greatest obstacles to success.

"What about the twenty kroner I lent you? You said you would pay me back during the summer."

"Yes; but we had no summer!"—Vikingen, Oslo.

A Profitable Side Line

Farmers Have Found Bee-Keeping Yields Large Returns

Beekeeping is an occupation that often yields a good profit and combines a healthy outdoor work in pleasant weather with the fascinating study of an insect whose marvelous habits are a subject of absorbing interests to the nature lover. All kinds of people may keep bees, and many do so as a kept in the city or country. With a little help for the heatest work, women often assist in the apiaries of men. Many farmers have found that as a side line beekeeping gives as large a return as anything else on the farm.

The successful management of an apiary does not require the expenditure of much time, but it does require an accurate knowledge of what to do and when to do it. To make this knowledge easily available to Canadian beekeepers the Dominion Government has issued a comprehensive bulletin on "Bees and How to Keep Them," which may be obtained free from the Publications Branch of the Department, at Ottawa.

It is pointed out in the bulletin that an abundance of honey-producing plant flowers, with a high average of favorable weather for the production and gathering of nectar, is necessary for a good country for the beekeeper. The bulk of Canadian honey is of unsurpassed quality and finds a ready market when properly described.

The production of honey in the prairie provinces during the past few years has already attained great size as is indicated by figures recently published by the statistics branch.

In 1926, there were 1,256 apiaries in British Columbia, and in 1926, 2,671. In the period the average yield per hive rose from 23.1 pounds to 52 pounds and the total yield from 25,-670 pounds to 136,257 pounds. The value of the output in six years has increased from $2,567 to $13,625. In two years the production of honey in Alberta has risen from 25,000 lbs. to 125,000, and the value from $12,500 to $35,550. In 1918 there were 1,500 apiaries of bees in Saskatchewan, and in 1926 approximately 3,000. In the eight years the production of honey alone has grown from 1,135 lbs. to 170,787 lbs., and its value from $233 to $37,-901.

Buying Less Coal From U.S.

Noticeable Decrease in Shipment Of Anthracite To Canada

Canadians to whom the United States formerly looked for its annual 4,000,000 tons of anthracite coal annually, are now buying very much less, declared Samuel D. Warriner, Philadelphia, chairman of the Anthracite Operators' Conference and president of the Lehigh Coal and Navigation Company, at a dinner in Scranton, Penn.

The decrease in Canadian anthracite coal purchases in the United States is due to the effect of the slogan, "Empire goods for Empire citizens," as well as the prices at which English coal has been sold.

Profit In Market Garden

A Vernon, B.C., fruit farmer, Mr. Monsees, has apparently solved the fruit and vegetable marketing problem. On the occasion of last fall's crop, tomatoes, peas, beans and spinach. So excellent is the quality that the entire crop is marketed. So profitable his return that he always winters in the south.

Jones—"I want a pair of bone for my wife. She wants them in the almond shade.

Saleslady—"Yes, sir. What shade of almond."

Indian Chief Treasured Perpetual Pass

An interesting incident is recalled by the recent celebrations in honor of the memory of Chief Crow Foot and the signing of Indian treaties was largely responsible for the signing of the famous Treaty Number 7 which threw open a new empire in the west for settlement.

It was back in the '80's after the treaty with the Blackfeet Indians had been signed, and about the time the Canadian Pacific Railway was pushing its lines of steel into the west. Chief Crow Foot had become known to William Van Horne, then general manager of the Canadian Pacific and as a token of the esteem held for the famous Indian chief, a pass was presented with a perpetual pass over the railway Company's lines. This pass became Crow Foot's most treasured possession and he exhibited it with pride among his tribesmen.

In some old records of the Company is proof of the old chief's gratitude. A letter to Van Horne reads as follows:

"Great Chief of the Railway,

"I salute you O Chief, O Great. I am pleased with railway boy, opening the road free to me. The chains and rich covering of your name, its wonderful power to open the road, show the greatness of your Chiefness. I have done.

"His
"Crow Foot
"Mark."

An Old Institution

Farmers Club Established In England In June 1727

One of the oldest social institutions in England is the Faversham Farmers' Club. It was established on June 21st, 1727, and its meetings have been held with unfailing regularity during two centuries.

When it was founded there were only twelve members. Later, however, the membership increased to 121. Originally the idea was that each member should entertain the others to dinner at his house once in twenty months, and some of the rules of the club were:

(1) "To have but one joint or dish, the same to be on the table exactly at two of the clock.

(2) "Not to attempt to drink what quantity of liquor he pleases.

(3) Any person to go when he thinks fit, without any interruption.

(4) All bets and wagers (except sixpence at cards) laid in the presence of the said club shall be applied for the good of the poor."

Any member is allowed to express appreciation or otherwise of his host's dinner, and the latter has the power to expel any member who has strayed from the path of rectitude.

Ranching In Alberta

Province Supplying Large Quantities Of Prime Beef For Eastern Markets

Though cattle ranching in Alberta is not now the extensive business it was twenty-five years ago, the mixed and feeder cattle show and sale held recently in Calgary, demonstrated that the ranches and farms of Alberta still supply large quantities of prime beef cattle to eastern and other markets. This year's show attracted a record number of competitive entries for the $7,500 in prize money. Most of the land in Alberta that a quarter of a century ago was used almost exclusively as open range is now productive mixed farming country, with dairying as one of the most profitable branches. Alberta is the third largest producer of butter of the nine provinces of Canada, with an output of about 25,000,000 pounds, and a yearly agricultural revenue valued at about $225,000,000.

Beef Grading Plan

Meetings Held To Hear Evidence Of Producers, Retailers and Consumers

Proposals to grade beef for market as has been done in the case of eggs, butter, cheese and other products, are being considered by a commission appointed by the Dominion Government. This commission, which included R. S. Hamer, of the Dominion Livestock Branch, Ottawa; J. G. Rowell, deputy minister of agriculture for Manitoba; F. M. Baker, representing the packing interests; R. A. Wright, president of the Winnipeg Stockyards Limited, and L. P. McOuat, of Ottawa, held meetings during the past month, hearing evidence from producers, packers and consumers as to the probable effect of a system of grading on the marketing of western beef.

Oriental Girl Wins Degree

With a flashing diamond set in one side of her nose and a string of sparkling gems hanging from each ear, Miss Malva Lakshiama, of Madras, India, received the degree of Bachelor of Medicine and Surgery at Glasgow University. The first Oriental to take a Glasgow medical degree, she was one of the fourteen girl students who were successful in an examination in which no men qualified.

A live wire is a much nicer thing to be than to fool with.

Cites Causes That Might Lead To War That Would Mean End Of Civilization

New Type Airplane Declared Successful

Craft Ascends Vertically and Climbs 1900 Feet a Minute

Successful tests of two new departures in aeronautics, a vertically rising plane of revolutionary design and a propellorless aeroplane motor, are announced respectively by the Curtiss Aeroplane Company, and Harry N. Atwood, veteran aviator.

Obstacles to perpendicular flight have been surmounted in wind tunnel tests at the Curtiss laboratories at Garden City, N.Y., of a new type of air craft in which can climb at the rate of 1,900 feet a minute, it is announced, and Curtiss directors voted to produce a standard plane of this type to cost $75,000.

The new Curtiss plane which embodies some of the principles of the autogyro, is the invention of M. B. Blecker, 24 years old.

The model, as tested, has four wings, though the proposed standard machine is to have three. These wings are on a horizontal plane and rotate above the fuselage. Propellers will be placed in the wing motors half way out on the leading edge. While the ability of the plane to rise vertically is considered an phenomenal, its forward speed will be from only 60 to 75 miles an hour.

The internal combustion engine developing 400 horse power will drive the propeller by utilizing the exhaust for a forward drive, much like a rocket, but without jet to concentrate the gas, Philadelphia, Atwood announced at Springfield, Mass.

The engine is bottle-shaped, with all of the mechanism inside. Its exploding gases may be discharged either into the air or water, permitting its use either as a marine or as an aeroplane motor.

Cultivates Former Gold Fields

Millionaire Invator Will Raise Wheat At Williams Creek, B.C.

While hoarded pioneers of the gold creeks looked on with gaping jaws and incredulous eyes, General Frank Bolton brought in the first gang plow that ever broke the sod and started turning over ground in Williams Creek, famous the world over for its golden wealth.

More than half a century ago, when the Cariboo gold fever was at its height, Williams Creek yielded precious metal to the value of more than $50,-000,000. General Sutton, who has a habit of making money in whatever part he may be located, now sees where a new kind of wealth in the valley that once was ploughed only for nuggets. He is bringing in a tractor that will reseed the entire cultivated area with grain. He may convert part of the valley into a golf course, where millionaire big-game hunters may seek variety in their recreation.

General Sutton, who made millions while acting as military adviser and munitions manufacturer for Chang Tso Lin, Manchurian war lord, is now said to be big money in Indian, possibly mines, farm lands and city real estate.

Record Crop Of Garnet Wheat

Sixty-five Bushels To the Acre Grading No. 1 Northern

A record crop of Garnet wheat, yielding 65 bushels per acre and of No. 1 northern grade, is reported by J. Siebert, whose farm is two miles west of Edmonton City Limits on the road to St. Albert. Threshing of this crop has been finished, and the yield, as the highest yet reported in the Edmonton district. A field of 25 acres was the last one sown this year and it was the first out, with the result that it yielded 1,635 bushels.

Establishing Settlers

British Government Spends $4,500,000 In Establishing Settlers On Canadian Farms

With the completion of the 2,000-family settlement scheme this year, the British Government will have invested $4,500,000 in establishing settlers upon Canadian farm lands. In addition to this the families have brought in $1,500,000 with them, according to figures by the Department of Immigration, so that the total new investment in agriculture as a result of the scheme is at least $6,000,000.

Take Turns In Walking

Two brothers, who are much the same way as the Siamese twins, are living in the little Serbian town of Neuhbuar. Although they are 19 they have one like 10. They are unable to turn their heads and are joined at the back. One boy always must look up, the other down. They can't talk properly. When walking they take it in turns, one carrying the other on his back, and it is interesting to see how quickly the change is made and appears a normal boy of 10, but the other is thin.

Voice over wire: "Madam, your husband has been run over by a truck!"

"Good heavens! On the afternoon of a bridge party!"

Poland's savings deposits are growing rapidly.

Possibility of war between the United States and Great Britain, with Japan as a British ally and Canada neutral, is seen in the not distant future by Lieut. Commander J. M. Kenworthy, M.P., in his book, "Peace or War," soon to be published in the U.S.

"If events move in the next ten years as in the past nine," he writes, "England will stand at the head of a European federation of distrust against America. If after 1931, there is no renewal of the Washington treaty of 1921, the world will accept the possibility of a devastating Anglo-American war. It would mean the end of civilization and the ruin of human culture."

Commander Kenworthy, member of the English house of commons and former member of the admiralty was for many years associated with the British and American people as natural and easily capable of being fanned into a consuming passion. Upon the politicians of both countries he lays the blame for the conditions he alleges.

"We muddle and drift and blunder," he writes, "hoping for the best. We shall get the worst. The stupid professionalism of the experts is largely to blame for the gathering rivalry of the two nations in naval affairs. The still more stupid readiness of both governments to follow their counsels is more culpable."

Jealousy of financial leadership of the United States, bitterness of the British people over payment of the war debt, and mounting commercial rivalry all are cited as factors in the growing hostility between nations.

The writer sees a naval alliance between Japan and Great Britain would include up the Panama canal and destroy the mobility of the United States fleet, leaving the nation at the mercy of its attackers.

Discussion of naval parity, security and preparedness, he writes, might well be abandoned at arms conference table in favor of more immediately practical considerations. Chief among the latter, he says, would be settlement of the issue of naval bases, never discussed at the last Geneva parley. There is no legal barrier, he points out, against modernization of British naval bases at Singapore and Halifax, but in the event of war between the two nations such fortifications would be of tremendous strategic advantage to Britain.

Other war possibilities outlined in Commander Kenworthy's book of conflict between Great Britain and Russia. The writer maintains that rivalry in the Orient may bring an outbreak there over which the governments and naval officers, he writes, are ambitions for a conquering role.

Introductions to Commander Kenworthy's book is contributed by H. G. Wells.

Winnipeg As Aviation Centre

Large Airdrome To Be Built For Use Of Air Liners

Winnipeg is soon to be a great aviation centre with a large airdrome to be built there from which air liners will leave regularly for all parts of the world according to T. B. Hudson, manager of the Western Canada Airways, which has moved its headquarters from Hudson to Winnipeg. Three new monopianes have already been ordered by the company and not less than six are to be purchased next year. The new machines are to be made necessary by the growing popularity of air travel, according to company officials. During the first eight months of this year the company carried more than 1,000 passengers, about 200,000 lbs. of express, and flew 100,000 miles in 1,500 flying hours.

Hens Lay Larger Eggs

Educational Work Of Poultry Associations Given the Credit

Because of the educational work of poultry associations and such organizations, hens are now laying larger eggs, was one of the main contentions of C. H. Tain, Montreal, chairman of the Express Traffic Association, in urging the Board of Railway Commissioners at Ottawa in Canada that the board grant permission to establish an estimated weight for billing of 55 pounds, for 50 dozen cases of eggs, instead of the present estimated weight of 55 pounds.

There are 12,370 post offices in Canada, 284,000 miles of telegraph lines and over 1,000,000 telephones with a three million wire mileage.

French automobile manufacturers are cutting production.

WORLD HAPPENINGS BRIEFLY TOLD

A new mining area thought to be extremely rich in lead, silver, zinc and gold has been discovered in Northern Manitoba.

Lieut.-Col. W. "Billy" Thackray, M.C., who served with distinction with the Canadian artillery in the Great War, died recently at Quebec.

Hail losses totalling approximately $2,500,000 were incurred by hail insurance companies operating in the three prairie provinces during the 1927 season.

One of the largest fish in the trout species yet caught in Alberta, if not the largest of the kind ever caught anywhere in the world, was recently taken out of the waters of Lake Athabaska recently by A. A. Arason, a fisherman.

Bread prices at Vancouver are down approximately ten per cent., according to an announcement by the Master Bakers' Association. The new rate in future cent nine cents, or three for 25 cents.

The city of Calgary has been presented with a model of the "Empress" Liner Calgarie by officers of the steamship company. Leo Tobin, general passenger superintendent of the company, made the presentation.

Russia has notified the League of Nations that the Soviet government will participate in the work of the preparatory commission on a disarmament conference, it was announced at League headquarters in Geneva.

The Westminster Gazette announced that Miss Mercedes Gleitz, the London typist and channel swimmer, will make an attempt to swim the Straits of Gibraltar in December. The distance of her contemplated swim is about 37 miles.

The Right Rev. Gennaro Hayasaka, the first Japanese in the history of the Roman Catholic church to be made bishop, received his robes and ring during and gloves, emblematic of his office, from Pope Pius XI. in an imposing consecration ceremony in St. Peter's.

Immigration during the last six months totalled 109,000 persons as compared with 91,000 in the same six months of 1926. The gains over last year were made in April, May and June, while the July, August and September figures show a slight falling off.

Another proposed trans-Atlantic flight this year has been announced. Commander Sohst and three companions would attempt the 4,500 mile air jump from New York to Rome late in December, and he hoped to land in the Eternal City on New Year's day.

Just a Faith Cure

The young countryman was suffering badly from headaches, so his mother sent for the doctor.

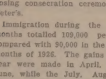
The doctor said to her, "Put some ice in a calico bag and tie it tightly over his head. He'll come back again in a day or so and see how he is."

On the next occasion, in response to the doctor's enquiry, the mother said, "his headache is quite gone, sir, but all the mice are dead."

There are, on an average, a hundred tornadoes every year in the United States, in which 250 people are killed, and eight million dollars lost in damage to property.

The Least Excitement Made Her Heart Palpitate and Flutter

Mrs. Ambrose Orser, Elginburg, Ont., writes:—"I suffered for some time with a bad heart which seemed to be controlled by nerves. The least little excitement would cause it to flutter and palpitate, and at times I would have real bad spells. I decided to try them this way for some time when, one day, I saw



advertised, so decided to try them. I had only taken a few boxes when I noticed that I felt better, so I continued taking them and in a short time my heart felt entirely different.'

Price 50c. a box at all druggists and dealers, or mailed direct on receipt of price by The T. Milburn Co., Limited, Toronto, Ont.

Canada's Mail Service

Has Reached Huge Proportions Since Confession Was Granted

Seventy-eight years ago on the 24th of July last the Imperial Government granted Canada the right to administer the postal service, a "concession" which had been asked for for years. Few now living can remember that event, and yet only those whose memories carry them back to at least the early years of Confederation are capable of realising how unreckonable have been the betterments in postal communication during the intervening decades. In fact, it is peculiarly significant of our time that the younger generation seem to take it for granted that public services were always efficient and speedy. They know nothing from experience of the conditions which obtained when the Dominion had its birth in 1867, and are therefore unable adequately to value the privileges enjoyed by them today.

The mail service of Canada has reached huge proportions. From the crudeness and inefficiency of the period when mail passed into the hands of the local Government seventy-eight years ago it has attained a perfection which is amazing. In the present revenue side it represents something like $45,000,000 per annum, involving the issue of about $35,000,000 in stamps. We may add as a matter of advance that has taken place when it is said that if the postal rates on the volume of matter handled now were the same as at the commencement of the nineteenth century, the resultant receipts would be sufficient in a single year to pay the net debt of the Dominion. Yet the transmission of letters is not the sole function of the postal service of today. It has also developed for an immense volume of financial business, by means of orders and drafts, as well as the transportation of parcels. In short, it is deeply interwoven with the entire economic and social life of the people. Perhaps the best way of illustrating briefly the comprehensive value could be brought about would be by suspending it for a week or ten days.

Plan For Coronation Of Japanese Emperor

Elaborate Ceremony Will Take Place In November 1928

Elaborate plans for the preparation for the coronation of the Emperor of Japan in November, 1928, are being made. Early next year an announcement of the date of the event will be made to the effect, according to the recent decision of the Preparatory Committee for Coronation. In Kobe, early in February, will be held the ritual of the selection of the sacred field where rice to be used in the coronation will be grown. This will consist of a ceremonial sowing and reaping the fissures opened in the shell by the heat indicating the location of the sacred field. Kobe will follow an elaborate ceremonial by specially selected maidens in planting the sacred rice, the accompaniment of music by court musicians. Other preliminaries will be selected in advance by the local prefectural governors.

Winnipeg Newspaper Union

Providing Food For Future Generations

Research Men Will Find New Foods and Ways Of Enriching Those Now Known

There was a time when all heat and power came from coal, and the wonder then was what would happen if the coal supply were exhausted. Then electricity was discovered, and waterfalls and streams were harnessed to give the world light and heat. Thoughtful folks have been wondering for some time just what is going to happen in future years when all the ground will be cultivated, and still there will not be enough food to feed the inhabitants of the earth. And yet before that happens we can already see hope for future generations when we read about the results obtained by research men. At the University of Wisconsin they have found that by exposing cow's milk to the radiations of a quartz vapor lamp, the richness of cow's milk in body building qualities was increased eight times, and a sample of goat's milk was increased in activity twenty-four times.

It was spoken before about the European countries where the cows themselves were subjected to these ultra violet rays from artificial lamps, and the milk was enriched thereby. And this of course is worth much in the winter when the cow is getting only dried grass instead of the rich green grass. And now even dried milk, whether produced in summer or winter, can likewise be enriched by these artificial rays.

What does this mean? That if a staple product like milk can be enriched in this way by the simple action of the sun's rays, and other foods have likewise been enriched, then we may reasonably expect that our research men will find new foods that can be enriched, and also other methods of enriching our present foods, aside from using the ultra violet rays. And there is always this to remember, that the majority of us could do with at least twenty-five per cent. less food than we now eat, provided that it were absolutely necessary, and remain strong and well.

Nova Scotia Scores At Imperial Show

Receives Greatest Number Of Points With British Columbia Second

Nova Scotia has won the second general challenge cup at the Imperial fruit show held at Manchester, England, official advice by cable to this effect was received by the Department of Agriculture.

Nova Scotia obtained the greatest number of points in the overseas section of the show. The basis upon which the cup is rewarded is: Four points for each first prize; three for each second prize; two for each third and one for each entry receiving honorable mention score card.

Nova Scotia had 41 entries and won seven first prizes, eight seconds and five thirds. British Columbia had 31 entries and won six firsts, six seconds and five thirds. Ontario has six entries and won one third, while Quebec had one entry which obtained first prize.

This is the seventh consecutive year the Imperial fruit show has been held, but the first year that the British Columbia section was eliminated and the overseas competition limited exclusively between the provinces of the Dominion.

Progress in Aerial Photography

Notable progress has been made in Canada in the employment of oblique aerial photographs for mapping some of the little known parts of the Dominion, it is revealed amongst the Topographical Survey Branch of the Department of the Interior in the general report on the work of aerial photography in Canada, over 25,000 photographs being on file on that branch to date.

An electric treadmill for exercising dogs has been invented in England.

The Hazards Of Aviation

Stunt Flying Can Now Serve No Good Purpose

The public, of course, has not reached the stage where it would forbid pioneering efforts in the advancement of aviation. But it has reached the stage where it regards the deliberate tempting of prizes for the risk of human life in the air as a detriment instead of an aid to the development of the art of flying, and where it believes that such whole-heartedly that stunt expeditions, which teach nothing, either those that are successful or those that end in failure, should be abolished in favor of well-considered and science advancing flights.

There will be fatalities as long as man essays to fly through the skies. Motor failures will bring the birdmen crashing to earth. But it does seem pathetic that unnecessary chances are being taken in aviation. There should be no sea-flying in land planes and no land-flying in seaplanes. That would seem to be a thoroughly logical reasoning. Unfortunately, however, logic, as we know, is not common sense to be replaced by a wild hysteria on the part of the enthusiast to do something in the air that has never been done before, and what is more will be no one can forefell.—Washington Star.

Hudson Straits Were Free Of Ice

Airman Patrolling Area Reported Open Water At End Of October

Daily radio reports received from airmen who are now flying the 400-mile stretch of Hudson straits have already accomplished one important purpose.

The navigation period of the straits, or how much nearer one is to the end one week longer than was heretofore admitted by many noted authorities. Officials of the marine and fisheries department declared that the airmen reported that there was not yet a sign of ice in the straits on Oct. 27th. The reports do not at all surprise so many of these officials, who are authorities on navigation and who confidently expected that ice and drifts down Fox channel into the straits shortly after October 1 at the latest. The straits are from 40 to 100 miles in width, so that it was not expected that navigation would close until a great deal of ice had drifted in. As the situation now stands, the last ship to leave the straits on Oct. 27, they are of the opinion that navigation will be open for into November, perhaps as late as December.

Reports received so far indicate that there is very little variation between the portions of the straits and in the Gulf, as well as in the St. Lawrence gulf. As a matter of fact, fog seems to be much less frequently in the straits.

Possibility Of War Remote

Last One Taught World a Lesson Says Austrian Ambassador

Possibility of another world war in the near future is very remote in the opinion of Baron George Franchen-Hoff, Austria ambassador to Great Britain.

"The last war taught us a lesson we will not, speedily forget," said the baron. "It was a colossal and tragic trophe that even now the world has not yet recovered from its blows."

The baron is in Canada on a mission for the sending of Austrian peasants to the Dominion to take up farm lands.

Have No Choice

"If you must walk on the highway walk on the left side of the road for using the oncoming traffic," says an advertisement issued by Hon. George S. Henry's highway safety committee. It is a good advice. But "if you must" comes rather ungraciously to pedestrians who in most cases have no choice between the highway and the ditch because there is no side path.

A Smart Daytime Dress

Charmingly simple is the smart dress shown here and a style easily fashioned by home modiste. There is an inverted plait at each side of the front panel, and the back is in one piece. The long rolling collar and vestes of contrasting material give a modish waistline effect, and the long dart-fitted sleeves are finished with shaped cuffs. Soft fabrics at the side seams and five in a wide bow at the back. No. 1571 is in sizes 36, 40, 42, 44, 46 and 48 inches bust. Size 40 requires 2½ yards 39-inch material, or 2¾ yards 35-inch, and ¼ yard 36 or 39-inch contrasting material (cut crosswise). Price 20 cents the pattern.

Planning Four-Day Liners

But Service Would Not Pay When Airplanes Are Perfected

Announcement that a group of American business men will build a fleet of 33-knot 20,000-ton liners across the Atlantic in four days aroused a fake a doubt in the mind of the marine engineer. It is not a technical but an economic question. Ships can be built with engines of sufficient power. Battle cruisers and destroyers have plowed the main at speeds even greater than those proposed. But at what a price in energy and fuel! Even if we grant that the bonehead in Egypt, piling stacks and other projections will reduce the resistance of air and water a four-day liner must be packed with engines and boilers. Little room will be left for passengers or fast freight.

Apparently, the sponsors of the new line of fully aware of the obstacles to be overcome. Even if twice or three times the present highest minimum transatlantic fare is charged, four day liners will find it hard to make a profit. The American port of the proposed line is to be New London, Conn. The voyage would be over in four minus almost a day is gained at one stroke. It is not astounding to learn that the new liners are to be built largely with money borrowed from the Shipping Board at a low rate of interest. There is also the probability that the heavy passenger and express mail at a speed unprecedented in the merchant service.

Although the necessities of ocean flying have been tragically driven home during the summer, who can doubt that the day of the trans-Atlantic liner has dawned with the successful voyages of Lindbergh and Chamberlin? Aeronautic engineers have unquestionably solved the problem which can be carried between Europe and America in easy stages through the air. The cost of not more than $500. It may be doubted if the fare of the new Atlantic liner could charge less than $750. There remains the airplane's chief drawback—its small capacity—but now, but what would be its chances when it must compete with a two-day flier?—New York Times.

Novel Experience For Turkey

Holiday Observed While First Census Was Taken

Turkey has undergone a novel experience, namely the taking of its first census.

The suspicious populace was convinced that the only possible motive was to discover how many men there were of military age, and to facilitate the attentions of the tax gatherers.

To offset the opposition, the government decided to keep the people at home while the counting was progressed. For this reason, Friday, which is a Turkish rest day, was chosen.

From the first streak of dawn, Constantinople seemed to be dead. Not a cab was to be seen in the streets. It was plunged into profound silence. Shops were closed and streets deserted. Even the cafes were forbidden to leave their doors open, and in this manner the census was completed.

The data collected included the names of men, women and children, with their age, religion, native language, profession and state of health and education.

Creatures Of Habit

All wild animals are naturally creatures of habit. They have their favorite feeding grounds to which they will go so long as they are not disturbed by any natural cause. They will use the same trails and even go to the same spot to lie down for their periodical rest. I have seen mountain sheep lying on the same promontory of a mountain peak on numerous occasions; and I have known of families of bears that came to identically the same spot to rest for salmon not only on nearly every day but at almost the same time. —Harold McCracken in "Field and Stream Magazine."

Lethbridge Air Harbor

Col. J. L. Ralston, Minister of National Defence, announces that a license for a public custom's air harbor has been granted to the city of Lethbridge. The flying field is situated within the city limits and is therefore readily accessible. It will be second to be established in Alberta, the other being Edmonton.

Training Canadian Indians

According to the latest figures there were 6,337 Indian pupils enrolled in the 74 residential schools under the Canadian Department of Indian Affairs. There were also 6,465 pupils in 276 Indian day schools in Canada. The numbers attending these schools are steadily increasing.

Record Haul Of Grain

Within 24 hours an amount of grain equal to Canada's total production in 1918, was hauled to elevators over Canadian Pacific lines. That record was 4,356,000 bushels—enough to provide bread for the whole population of the British Isles for one week.

Molly—Won't you play something more, Professor? Please don't be getting late. I shall disturb the neighbors. Molly—Oh, it doesn't matter about them—they poisoned our cat last week.—London Passing Show.

Christmas and New Year's day fall on Sunday this year, but, as usual, will fall hardest upon father.

Minard's Liniment for Neuritis.

On Good-will Mission

Photo shows Sir Esme Howard, ambassador from Great Britain, (left), with Admiral Sir Walter H. Cowan, commanding H.M.S. Calcutta and 12 H.M.S. Cairo, two of Great Britain's cruisers on a good-will mission, at Washington navy yards.

SUNDAY SCHOOL LESSON

NOVEMBER 13

HOSEA PREACHES GOD'S LOVE

Golden Text: "I desire goodness not sacrifice; and the knowledge of God more than burnt offerings."—Hosea 6:6.

Lesson: Hosea, Chapters 6, 11, and 14.

Devotional Reading: Psalm 36:5-10.

Explanations and Comments

I. Jehovah's Love For Israel, 11:1-4. When Israel was a child—at the beginning of its national existence, "then I loved him, and called my son out of Egypt." Jehovah in Egypt "called him, locally, into the land of Canaan, and morally, to act an example of true religion."—Davis.

"Hosea dwells on that beautiful past, half in melancholy reflection on the contrast, and half in persuasive pleading that the old relations between the nation and their God may be restored. The early days in Egypt and the Desert were a history of grace on the part of God. The prophet opens to his hearers a view of Israel's religious history, and sets God's love claiming them, and meeting them with its response."—Black.

"The more the prophets called them, the more they went from them; they sacrificed unto the Baalim, and burned incense to graven images." "What, then, was the divine purpose in Egypt? They kept up a church within the nation, and they developed those which bore fruit in due time."—Cheyne.

Hosea next compares God with a father who teaches his child to walk and carries it when wearied in his arms, but the child failed to recognize that it was Jehovah who healed him. Then the prophet changes the figure from that of a child being trained by a parent to that of oxen driven by a husbandman and fed by him. "I drew them with cords of a man"—not with reins like oxen, but with cords like human beings—"with bands (collars) of love; and I was to them as they that lift up the yoke on their jaws, and I laid food before them." Oxen have no reins to be guided by a bridle, and the yoke is fixed over the brow near the horns, and not over the neck as with us, but on the animal's cheeks that it may not hurt the neck.

"How much more clearly should the Christian church see in the life of Christ after the greatest of all object lessons of Jesus' love. The whole life of Christ throbs with human tenderness, with human sympathy with men in their joy and their sorrow, mingling with a little child, and with all on whom the yoke pressed, for he himself was a heavy laden. Can He fail to draw all men unto Himself? Will not the sight of a man He is drawing all men; in the spirit of love he is binding the world together. Who can resist the appeal?"—Hugh Black.

Ancient Oriental Custom

Mohammedan Prince Receives Salary According To His Weight

The Aga Khan, fabulously wealthy Indian potentate, received an annual subsidy according to his weight.

The Prince, as a descendant of Mohammed, is spiritual chief of the Ismaili sect of Mohammedans, with about 5,000,000 followers, and is also one of the leading racing men in England. He is actually paid his weight in gold every year, which is a kind of tribute.

It is a very ancient Oriental custom and it is carried out in a curious way.

At the end of the Mohammedan year a committee of elders come from India, weigh the Aga Khan very solemnly—he now tips the scales at 220 pounds—hand over the exact amount in gold bullion, and go back hastily for his services on behalf of the sect and then humbly beg him for a little hard earth of the water in which he has bathed.

The members of the Ismaili sect believe that the water in which their leader has bathed is holy, and keep a single drop of it will drive away illness, or evil spirits.

The Aga Khan has to keep his 5,000,000 followers well supplied with this holy water, although each one receives only a tiny bottle, and almost every week he has a barrel of it sent to some out-of-the-way Indian, Asian or African port, where it is received with great honors.

In spite of his spiritual duties, he finds time to direct one of the biggest racing stables in Europe and to attend every important French and English racing meet. He is an excellent judge of horses and he has won millions of dollars on the tracks.

Saskatchewan Honey Production

The honey industry in Saskatchewan has grown from six colonies in 1918 to 3,000 in 1926, according to provincial figures. The production of honey has risen from 4,000 lbs. to 100,000 lbs. and the value from $220 to $35,000.

Fish rise and fall in the water by means of an air bladder inside them.

Nature seldom hides a massive brain behind a pretty face.

Parson: "It was disgraceful the way that Lars snored in church!"

Pastor: "It was! He woke us all up!"—Vikingen, Oslo.

Fokker Foresees Millions Of Planes

Aviation is Great Factor For Peace Says Designer and Builder

A million or more planes blackening the air over America from their planes, in which the young man can take his sweetheart for a ride in a dual control side-by-side cockpit, to giant mail monoplanes, are what were pictured by Anthony H. G. Fokker, at a luncheon of the Netherlands Chamber of Commerce in New York.

Mr. Fokker said the development of commercial flying was closely linked to military aviation and that the nations of Europe have profited this. The subsidies granted to air transport lines in Europe for commercial purposes have been part of the general preparation plan for future wars whereby pilots would be trained and fleets, hangars and workshops provided for future military use.

"Aviation is the cheapest and most efficient method for killing people," Mr. Fokker said. "In a city like New York bombing planes landed with gas bombs could cause a million persons absolutely without fail. So important will aviation be as an offensive and defensive weapon in another war and greater the range of planes that the safest place for men will be the front line trenches."

The designer suggested that aviation was a factor for peace by its very deadliness as a potential weapon of offense.

"Men are not so likely to start a war or to help keep one going," he said, "when they realize that nowhere can they find safety themselves. The man who stays away from the front to manufacture shells and guns or construct ships is no more dangerous than the man at the front."

Newspapers Come First

Should Form Main Cogs In All Advertising Campaigns

Many remarkable testimonials to the efficacy of newspaper advertising have been given within recent weeks by prominent business executives, but none carried more weight than that given to the Association of Canadian Advertisers at its convention recently by Alexander Mackenzie, general manager of the International Carbon Company. Speaking on the subject, "Newspapers as a Primary Medium," Mr. Mackenzie contended that the major portion of any advertising campaign should be carried out through the newspapers. He did not suggest that newspapers only should be used for advertising, that there were some other effective media, but he insisted that newspapers should form the main cogs in any advertising campaign.

Making It Clear

Mr. Pritchard, the village grocer, was a very honest man. It had been said to him that he could never tell most every question that was put to him.

When, therefore, a certain woman entered his shop and asked whether he knew how long the dodo had been extinct, he was only too ready with his reply.

"Oh, about three thousand years, I should say," he replied. "Maybe more and maybe less."

"Right," said the customer briskly, dumping her shopping basket on the counter, "then understand that I don't want any of his eggs."

Fair Rider—What kind of a horse is that?

Groom—Walk, trot and canter miss.

"Well, I want a horse that does one thing at a time."

Some foods and their money are difficult to separate.

An outward laugh sometimes conceals an inward groan.

It's no trouble at all to find trouble.

Says Marriage Prolongs Life

Wives Live Longer Than Single Women Declares Actuary

Married women live longer than single women, according to the Irish Government Actuary, Sir Alfred Watson.

In a report on his tables based on the population returns revised in the 1911 census, and on the average number of deaths recorded in the three years 1909-11, rates of mortality for single, married and widowed women show that the advantage lies with the married state.

At the youngest ages for which comparison was possible the lightest rates were those for single women. Rates for single and married women differed but slightly between the ages of 24 and 27. But thereafter the rates for married women were usually lower than those of single women, and widows while rates for widows were invariably heavier than those for single women or wives.

LESSON No. 15

Question: Why is *emulsified cod-liver oil so* important as an added ration with milk in the diet of children?

Answer: Because when it is mixed with milk *it makes milk* a more efficient rickets-preventing food and builder of strong bones. Children like it best in the form of

SCOTT'S EMULSION

PAINTED FIRES

By NELLIE L. McCLUNG

COPYRIGHT, CANADA, 1923

CHAPTER XI.—Continued.

Helmi carefully studied her ticket—a pale mauve strip of paper with yellow back, on which were strange words. She saw the names Saskatoon, Edmonton and Battle River, for this last was her destination. Mrs. St. John told her she was going to a lovely spot in the country where a lot of men worked in mines. Mrs. St. John had heard her husband speak of it, she said. Helmi shrugged her shoulders doubtfully. Mines where a lot of men worked did not sound very attractive. It would mean that she would have to cook, scrub floors and wash big white cups with ugly tea-stains, and have no good times at all. She would rather stay in the city, where she would find a girls' club and go to suppers in basements, and play basket-ball in school-yards, and see lovely things in shop windows, and eat ice-cream cones, and perhaps have another chance at night school; then on Sundays she would go to church and hear a lovely organ with a sweet religious sound, and perhaps she might find another Miss Abbie.

Helmi now recalled Aunt Lilly's advice and faithfully said it over and over again—"Leave men alone—they break your heart." She was determined that she would always remember this. Girls were best, nice girls like Easy Powers and Hattie. She wished now that she could write Easy and Hattie and tell them everything, but Mrs. St. John had warned her to write to no one. The Girls' Friendly would try to find her and bring her back, so she must give them no clue. It was all finished. She would not be a girl, and they would set the police after her. Helmi shuddered when she thought of the police and the angry, red-faced old man who would look fiercely at her in the police court. Still it certainly did not seem right to run away from the word to the scene Abbie and the girls,—but oh! it was great to be free! The joy of life and living enfolded her so closely as she journeyed that there was no room for resentment in her heart. At this distance she could even think tolerantly of the Hymns. She would come back some day a very rich lady and buy out the Girls' Friendly house and run it herself. Or perhaps she would not do would be to burn all the girls' uniforms and give every girl a new dress —pink, blue, mauve, and henna, according to the taste—and she would drive a little car and take the girls riding with her in turns. They would feel how all things.

Bubbling up through all Helmi's dreams came the joyous consciousness of freedom. She remembered the day she had watched the birds in Mrs. St. John's garden—that lovely September day of amber sunshine so long ago now. She remembered the dainty yellow birds in the pretty gold cages, with the little throats gurgling with melody, and the big, fat, grey birds, cousins, dark in color, harsh of voice, but free! Pilgrims of the upper air were they, and she knew where a lot of men worked in mines. Mrs. St. John had heard her husband speak of it, she said. Helmi shrugged her shoulders doubtfully. If mine where a lot of men worked did not sound very attractive. It would mean that she would have to cook, scrub floors and wash big white cups with ugly tea-stains, and have no good times at all. She would rather stay in the city, where she would find a girls' club and go to suppers in basements, and play basket-ball in school-yards, and see lovely things in shop windows, and eat ice-cream cones, and perhaps have another chance at night school; then on Sundays she would go to church and hear a lovely organ with a sweet religious sound, and perhaps she might find another Miss Abbie.

Helmi now recalled Aunt Lilly's advice and faithfully said it over and over again—"Leave men alone—they break your heart." She was determined that she would always remember this. Girls were best, nice girls like Easy Powers and Hattie. She wished now that she could write Easy and Hattie and tell them everything, but Mrs. St. John had warned her to write to no one. The Girls' Friendly would try to find her and bring her back, so she must give them no clue. It was all finished. She would not be a girl, and they would set the police after her. Helmi shuddered when she thought of the police and the angry, red-faced old man who would look fiercely at her in the police court. Still it certainly did not seem right to run away from the word to the scene Abbie and the girls,—but oh! it was great to be free! The joy of life and living enfolded her so closely as she journeyed that there was no room for resentment in her heart. At this distance she could even think tolerantly of the Hymns. She would come back some day a very rich lady and buy out the Girls' Friendly house and run it herself. Or perhaps she would not do would be to burn all the girls' uniforms and give every girl a new dress —pink, blue, mauve, and henna, according to the taste—and she would drive a little car and take the girls riding with her in turns. They would feel how all things.

Bubbling up through all Helmi's dreams came the joyous consciousness of freedom. She remembered the day she had watched the birds in Mrs. St.

What is wrong with the tea? If this question is ever asked at the table you may find that the tea you are using was in a poor package. Careful experiments have proven that Aluminum is the only fit package to keep good tea in. You should try Red Rose Tea and see how fresh and full-flavored it is in the Aluminum package. 107

sticky children occupied a double seat half-way down the car. Wise Helmi came out of the drawing-room and sat down on her way to the diner, the woman smiled her thanks gratefully. "I hope that girl knows when she's well off," she said. "Gosh! it's me for single and free! that place is myself with this gang of mine, where I could wallop them in peace without having folks stare at me. But ain't the way of the world? You just had 'em! People with big families have small houses; people in big houses have none at all. It sure does seem strange—but what can a person do? Maudie, I'll lay you cold if you don't stop teasing the baby."

When Helmi was on her way back the family was in a state of extraordinary commotion. Charley, the five-year-old, was getting a preliminary cleaning up by the method known as a "spit"wash," the young man objecting with might, not to the method alone, but to the whole battle principle. In addition to her operations on Charley the mother was trying to quell the fight that had broken out between Maudie and the baby over the finding of a nut-bar in the general turmoil of the family lunch. Maudie and the baby, which were wedged in between the children on the seat. "Maudie, stop! Don't take it from him—let him eat it! The baby has had nothing and he's hoarsely protested. Maudie's voice was hoarse with roaring. Maudie had been in the habit of being "bossy" with the family clatter. "Oh, leave him alone while he's good!" cried the mother in despair. "Let me have a moment's peace, even if it does make him sick, I'll give him castor oil to-night. Stand still Charley, or I'll lay you cold! Now then it was all right, forgot her instructions, forgot that she was a fugitive from the law—she only knew that here were people who needed a friendly hand of the sort that she could supply.

(To Be Continued.)

New Shops Required For Aviation Industry

Many Types Of 'Planes Being Built In Canada

An indication that aviation is making rapid progress in Canada is seen in the industrial construction program announced by Canadian Vickers Limited, Montreal. The company erected a large building for aviation purposes last summer and another will be constructed in the near future.

There are now 52 machines in course of construction or on order, 12 of these being Avro aeroplanes ordered by the Canadian Government for the training part of the Royal Canadian Air Force program of 26. Although nothing official has been announced, it is understood that of the remaining 14 will be Be Haviland Moths, three and will be Fairchild machines.

These Avro 'planes will be land machines, specially constructed to training purposes at Camp Borden, and are to be biplanes, with capacity for about 51 gallons of gasoline, and will be propelled by a Lynx, Armstrong-Siddeley engine. Two passengers will be carried in each machine.

Eight Vickers "Vedette," three-seater, single engined flying boats are also on order. These are used principally for oblique photography and fire control. Lynx, and possibly Wright Whirlwind, motors will be fitted to these.

Two Vickers "Varuna," seven-passenger machines are on order, one of these having an all-metal hull. The type of flying boat is used principally for fire suppression and vertical photography.

Every cloud has a silver lining, and even an old suit of clothes has its shiny side.

A street car runs twice as fast when a man is trying to catch it as it does when he is riding in it.

Glasgow now has greyhound racing

Large Pimples Lasted A Year Cuticura Heals

"My face and neck were all covered with pimples. They were red, hard and large and festered and scaled over. For a while the itching and burning were so severe that I could not help scratching. My face was disfigured. I lost my sleep for about a month on account of the irritation. The trouble lasted one year.

"I used other remedies but they failed to help me. I sent for a free sample of Cuticura Soap and Ointment. After using it I purchased one cake of Cuticura Soap and one box of Ointment and in a month and a half I was healed." (Signed) Miss Emily Doll, Riverton, Man.

Clear the pores of impurities by daily use of Cuticura Soap, with touches of Cuticura Ointment as needed to soothe and heal. Cuticura Talcum is fragrant and refreshing, an ideal toilet powder.

Sample Each Free by Mail. Address Canadian Depot: "Cuticura Laboratories, Dept. 20, Montreal." Sold everywhere. Soap 25c. Ointment 25 and 50c. Talcum 25c.

Cuticura Shaving Stick 25c.

Praise For Maritimers

Hon. R. B. Bennett Refers To Contribution Made By People Of Provinces By the Sea

Declaring he supposed no people in the world were as attached to one another as the men and women who come from the Maritime Provinces, Hon. R. B. Bennett, leader of the National Conservative Party in the House of Commons, addressing 400 of his kinsmen from New Brunswick, Nova Scotia and Prince Edward Island, told of their history, sacrifices and traditions; the natural beauties of the land they left behind and endowed the generations as to why they are so classified by stating that "what binds us is the love of the land in which we were born—a love that is not rivalled by any people of the earth unless it be the Scotch. The spirit of loyalty and devotion to name and principles is just a little stronger there."

He told how the early history of this country was laid at St. Croix, Port Royal and Quebec, how responsible Government and parliamentary institutions in British North America had their beginning there, and how much what may have been their feelings, they laid the foundation for an educational supremacy in institutions that were the envy of all people. The Maritime poor indeed would Western Canada have been without the contribution the Maritime Provinces had made to the bench and professions. "Looking over this great gathering is it any wonder that the Maritimes now feel the loss," he said.

"With a proud conviction of the greatness of Canada and a lover of a prosperous country I look with pride on whole Dominion. Inspired by our history we look forward, ever forward. We can no longer look over our shoulder at our departed great," he said.

Speaking of the responsibilities of a new position, Mr. Bennett said he had no desire to be long in office who say that the problems facing Canada today are so great that the solution must be broken up to solve them.

"That is not in the mind of the people of this province," he declared. "It is life and death to us today that there are no men so great as the men of a generation or two ago. The spirit of the Fathers breathes in the young men of today."

Had Terrible Experiences

Survivor Of Jutland Battle Most Helplessly Maimed Person In England

The police at Bradford have just sent to the Admiralty, in the care of an officer, a man who is probably the most helplessly maimed man in England. They found him in the streets in a condition of complete collapse, trying to support himself with a pair of crutches. He described himself as:

Left leg off at the thigh.
Right leg off at the knee.
Left arm useless and withered.
Right arm partially paralyzed.
Eye gone and replaced by a silver plate.

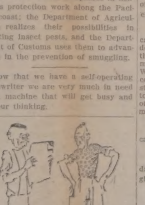
O'Malley told the police that in the battle with Germany he was a first class petty officer on H.M.S. Queen Mary. After the Battle of Jutland he was one among many reported killed in action. He is married and has a child. He says that memorable encounter he was picked up by the enemy a raving lunatic. They took a good look at him and the remains took him into Wilhelmshaven, and for ten years he was one of the inmates of a great asylum. In spite of the terrible suffering he has had, he actually became normal, and at last the Germans considered he was a fit subject for exchange. Accordingly they sent him to Tilbury with a cork leg, a pair of crutches and ten dollars in English money in his pocket. From Tilbury, O'Malley made his way to Brighton. The Germans, he says, says treating him fairly well, but only allowed him one meal a day. He had no one to talk to, no amusements, and nothing to read.

Minard's Liniment for Distemper.

Canada's Use Of Aircraft

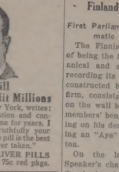
In addition to the forest, survey, exploration, and mining services using aircraft in Canada, the Department of Marine and Fisheries is actively interested in the use of aeroplanes in fisheries protection work along the Pacific coast, the Department of Agriculture realizes their possibilities in fighting insect pests, and the Department of Customs uses them to advantage in the prevention of smuggling.

Now that we have a self-operating typewriter, the next branch in need of a machine that will get busy and do our thinking.



"Why do you say you have a presentiment of misfortune about Abon dio?"

"Because I have just read that he is dead."—Buen Humor, Madrid.



This Discovery Will Benefit Millions

Mr. W. J. Dorion, New York, writes: "Sick headache, indigestion and constipation have troubled me for years. I tried everything but truthfully your purely vegetable laxative pill is the best daily regulator I have ever taken."

CARTER'S LITTLE LIVER PILLS

Gift For B.C. University

Series Of Pictures Portray Early Days In Province

With a view to perpetuating for future generations in British Columbia the chief exploits connected with early days in the province the Native Sons of British Columbia, a local patriotic society, promoted the idea of having a series of paintings placed in the University of British Columbia, and with the co-operation and financial assistance of the Hudson's Bay Company the scheme was brought to a successful issue recently when eight pictures painted by John Innes, well-known artist, were formally presented to the university by Carlyle W. Sale, governor of the company, and accepted by Magistrate H. C. Shaw on behalf of the board of governors of the university.

GUARD THE CHILDREN FROM AUTUMN COLDS

The Fall is the most severe season of the year for colds—more than ½ warm, the next cold and wet, and unless the mother is on her guard, the little ones are seized with colds that may hang on all winter. Baby's Own Tablets are the best of all medicines for preventing or banishing colds. They act as a gentle laxative, keeping the bowels and stomach free and sweet. An occasional dose of Tablets will prevent colds, or if it does come on suddenly their prompt use will relieve the baby. They are sold by all medicine dealers or by mail at 25 cts. a box from The Dr. Williams' Medicine Co., Brockville, Ont.

How Turkey Handles Speeders

Patrolman Instructed To Throw Nails In Their Path

A unique method of combating the tendency of Constantinople motorists toward excessive speeding has been put into practice recently by the police, in addition to providing for a motorcycle traffic squad, has issued instructions to patrolmen to throw nails and with short nails to throw in the path of *recklessly speeding drivers.*

Unfortunately for the motorists, cobbled and hilly streets are no bar to the chauffeurs, who drive at breakneck speeds, causing many casualties.

The mayor says the new campaign will be against excessive noise. He sees no reason why the ordinary automobile should equal like a fire engine answering a call.

The British Policy

Helping Other Lands To Achieve Best Possible Results

Dr. Adams, ex-Deputy-Principal of McGill, who has returned from a visit to the East, says that the British have made Palestine prosperous. Brigandage has been suppressed, roads have been improved and extended, and reforestation is being studied. Trees have replaced thistles and the inhabitants are benefiting. The military force numbers but a thousand, and the police forces are limited. The High Commissioner is Lord Plumer, a great soldier, who is also a most capable administrator. The improved conditions are due to the pacific nature of things. It is the British way to help other lands and peoples to achieve the best possible results. —Montreal Gazette.

Worse Than Infantile Paralysis

Infantile paralysis is a fee-less compared to rheumatic fever in the opinion of Dr. John Meakins, of McGill University, who spoke at the post graduate medical conference in Kansas City. The symptoms of rheumatic fever often are found in five-year old children and are wrongly called growing pains, he said. In a large number of cases this develops into heart disease.

Worms, by the irritation that they cause in the stomach and intestines, digestive infants of the nourishment that they should derive from food, and mal-nutrition is the result. Miller's Worm Powders are a safe, sure means to correct the morbid conditions in the stomach and bowels that are favorable to worms, and to expel and kill them so of the child is assured and development of the system encouraged.

Blake: I wonder who owned this car before I bought it.

Hamilton: Why?

Blake: Whenever it comes to a dark place on a lonely road the engine dies.

The old fashioned fellow who never thought anything of walking 12 or 20 miles in an afternoon has a grandson who never thought of it either.

Before marriage a man is easily led; after marriage it is more likely to be rare.

Girls beg the question when they try to fashion men to propose.

Minard's Liniment for Chilblains.

Finland Uses New Device

First Parliament To Introduce Automatic Voting Apparatus

The Finnish Parliament can boast of being the first to introduce a mechanical and automatic apparatus for recording its divisions. The apparatus constructed by a Swedish electrical firm, consists of a large table, behind on the wall behind by wires with the members' benches, every member having on his desk a small table containing an "Aye" button and a "No" button.

On the large table behind the Speaker's chair are connected to the Speaker's chair the result of the division is registered within the amazingly brief time of about two seconds, while in the ordinary course a division requires some fifteen minutes. In case a member prefers not to cast his vote, he presses both the "Aye" and the "No" button.

He can press a button only once, and after he has done it a lamp is lighted on his desk to indicate that he has performed his duty. There is no possibility of tampering with the vote except that each individual member might work the buttons of his absent neighbor. But here, again the appearance of the light signal would probably deter him.

Little Helps For This Week

In the fear of the Lord is strong confidence, and His children shall have a place of refuge.—Prov. xiv. 26.

Have faith in God; for He who reigns on high
Hath borne thy grief, and hears the plaintiff's sigh
Still to His arms thy only refuge fly,—
Have faith in God.
—Anna Shipton.

Trust Him; trust Him about every one and everything, for all times and in all places; and you will find Him the quest of sin, the growth of holiness, the cross that chafes, the grace that helps. To trust Him is to glorify Him.—Thorold.

An Interesting Demonstration

Noise Of Fish Swimming Amplified By Radio Sounds Like Thunder

The inhabitants of Thor have a noisy equal in the goldfish.

The noise occasioned by the swimming of a goldfish in a bowl at the electric and industrial exposition in Grand Central Palace, New York, was amplified by radio 20,000,000 times, and sounded like a waterfall over the roar of distant thunder.

Likewise, the human heart beats can be made to sound like the noise of hammer blows, and the gentle crushing of a paper bag sounded like the popping of many firecrackers.

These demonstrations are those of Hugh Gernsback, radio news writer.

Trade With West Indies Good

Business between British Columbia and the British West Indies, which has been developed since the British Columbia West Indies Steamship Line was established little more than a year ago, is proceeding satisfactorily. On October 15, Freighter Clan Macgillivray, of this service, sailed with a cargo of 2,400 tons for British West Indian ports, the consignments including 900 tons of British Columbia potatoes, onions, butter, cheese, salmon, newsprint and rope.

Bob—"He can't fight!"

Pete—"Can't, eh? Say, when he swings and misses, the other fellow gets pneumonia."

Teacher—"Bobby, what is butter?"

Bobby — "Something that makes popcorn better with."

Sore throats
Rub Vicks on throat and chest. Relieves two ways at once—absorbed, inhaled.

THURSDAY, NOVEMBER 10, 1927.

"POPPY DAY"

The eleventh day of November brings round the anniversary of the signing of the Armistice; bringing to an end the four years of slaughter and agony which drenched the world in blood and tears.

We call this day the "Day of Remembrance," and dedicate our thoughts to the thousands of the flower of our youth and manhood who went forth to the great adventure and gave their lives as a sacrifice on the altar of a threatened civilization, and to the building of a better and more tolerant world.

We have come to regard the poppy as the symbol of remembrance for this day, because its bloom was the marking place of many thousand gallant dead sleeping beneath; and it alone would seem could stay with us the "dead" amid all the desolation, and give a promise of life.

And now our outward token of "remembrance" on this day is a replica of the Flanders' poppy, and in wearing it we pay our humble tribute to those who sleep over there; and perhaps would be their greatest wish, could they speak, we help the broken and disabled living who were their Comrades.

Those tokens are made by those of our disabled who, through their service and wounds, are entitled to take their place in the competitive labor market, and in addition, afford a pleasant and helpful form of sheltered employment.

The National Campaign is carried on under the direction of the Canadian Legion of the British Empire Service League. The proceeds of the street sales are used for the relief of temporary distressed ex-service men and their families.

By wearing a poppy on Armistice Day we thus serve a double purpose; remembrance of the dead, and help for the broken living.

"Canada expects every man, woman and child to wear a poppy that day."

DO IT NOW!

It is never too late to learn that it is never too early to do your Christmas shopping. It is not now too late to learn that the early Christmas shopping has already begun.

There is only one excuse for putting off the holiday buying until the eleventh hour, and that excuse is financial shortage. Even this excuse is no longer being accepted by the credit departments of many stores.

The blessings of early Christmas buying are so many that it is difficult to understand why there are still people who do their shopping on Christmas eve. Depleted stocks, tired clerks, crowded stores and the necessity for haste are only a part of the arguments against the last minute rush.

Every merchant is as desirous of giving service and as good selection of stock as every customer is desirous of obtaining them, and that is why many inducements in the way of credit sales, deposit purchases and Christmas storage are offered at this time of the year. There is only a certain amount of Christmas buying to be done, whether early or late, so the inducements to shop now should be sufficient to early shopping than to make it as comfortable, convenient and satisfactory as possible.

Everybody, everywhere, predicts a record Christmas business this year, and it is all the more reason to obey that impulse and do your Christmas shopping early.

* * *

As in previous years, Angus McKay entertained the wrestling crew to a turkey supper on Friday evening. After supper sones were rendered by Bill Marsh and Ernie Timperley; Miss Florence McKay delighted her audience with a piano solo; and the recitation by Perley Courser was much enjoyed. At the conclusion of a very pleasant evening camp broke for another year with the singing of "Auld Lang Syne."

* * *

[Held over from last week]

The harvest home services in the United Church Sunday evening was as usual of a special nature. Rev. I. Forster, of Craigmyle, was the preacher for the night and delivered a harvest thanksgiving sermon. The junior girls' choir rendered a pretty thanksgiving anthem entitled "Harvest-time is Here." The Church, decorated with grain, fruits and vegetables, made all feel what a bountiful harvest there was, and the need of all to be truly thankful for all the good things God has bestowed on us.

Monday evening was the Harvest Home concert and as usual the ladies made a grand success of it. The tables were loaded with many good things to eat, and the waitresses supplied many more hot from the kitchen. The decorations were yellow and black, and took on Hallowe'en spooky style, with jack-o'-lanterns, witches and black cats. The tables were unusually pretty with their many small candles and clothes trimmed in yellow, and the waitresses set them off dressed in pretty bandos and yellow ribbed aprons. The supper was ample and all who would got a hearty feast. The program consisted of a Mission Band "Welcome Song"; recitation, "Hilly Conkey"; piano duet, recitation by Mrs. Newcombe; junior choir, anthem; and a vocal solo by Mr. Newcombe, all of which were heartily applauded. The pictures shown were of the Yukon and the lake districts of England. These were accompanied by a lecture on the same by Rev. J. B. Geeson. The financial results were very gratifying, and all who helped to make the services a success can feel well repaid for their trouble.

Increasing the Value of Canada's Fur Resources

There are thousands of trappers in Canada, and all of them are engaged at one time or another during the winter season in taking the pelts of wild fur-bearers. There is hardly a farm, village or a town in Canada that has not got its trapper or fur trader. Millions of dollars are distributed each year among these persons as a result of the disposal of Canada's annual raw fur catch. Last year it had a value of $15,072,244. A very considerable increase in the yearly value would be made possible were proper methods of pelt handling more widely known.

Too many trappers think that once they have taken a skin nothing else remains to be done. Amateur and farmer trappers which form more than half of the trapping fraternity are the chief losers through this lack of knowledge in the handling of raw pelts, as poorly prepared pelts bring much lower prices than those which have been properly prepared. Leading fur authorities have stressed the fact that in many cases up to one half of the pelts coming to the raw fur markets fall into the unprofitable class, and that every year there is a tremendous loss in pelt values that could be prevented. The loss, however, is not confined to the careless trapper, but affects the whole fur industry, and lowers the value of both the raw and finished product.

With a view to improving this condition, and making possible a wider knowledge of the essentials necessary to the proper skinning, stretching and drying of raw pelts, a monograph, entitled, "The Preparation of Pelts for the Market," has been prepared by the Department of the Interior. This monograph will be sent free of charge on request to the Director, National Resources Intelligence Service, Department of the Interior, Ottawa.

Alberta Cattle Top Chicago Market.

Forty-one head of Alberta grain-finished steers shipped by F. Burns & Co., to Chicago recently, set a new figure on that market for this class of cattle during the season. These steers sold at $14.65 per hundred pounds, exceeding the previous high price by 65 cents. Good prices on the American markets have attracted large shipments of cattle from the western provinces during the past few months.
